2.3	System Configuration: Quick Reference	2-11
3	MMC Programs (in numerical order)	3-1

Part 1. Introduction to Programming

It is strongly recommended that you read the whole of this part of the manual as it provides a useful overview of MMC programming procedures.

1.1 Using this Manual

- For a comprehensive list of available MMCs in numerical order, see [section 2.1](#) in Part 2.
- For quick reference, Part 2 also provides a [table](#) indicating which systems can use each MMC. “Y” (Yes) in the appropriate column indicates that an MMC can be used for that system. The table also lists default settings for each MMC (for the UK only).
- To begin programming, refer to the appropriate MMC(s) in [Part 3](#). When you select an MMC, check the header bar. This also tells you if the program is available on your system.
- When in programming, to quickly check the allowed configuration settings for your system—for example, the number of trunk group members, card port numbers, and so on—see [section 2.3, System Configuration: Quick Reference](#), in Part 2.

1.2 Systems Covered in this Manual

This manual describes the MMC programming required for the Samsung keyphone systems listed in the following table. The table includes the name by which each system is referred to in this manual to avoid using the full name each time, and any other relevant details.

Keyphone System	Referred Name	Note
DCS	DCS	Unless otherwise stated, references to “DCS” in this manual include Compact I systems.
DCS Compact	Compact I (or CI)	See note above.
DCS Compact II	Compact II (or CII)	
DCS-816	816	
DCS-408	408	
DCS-408i	408i	
iDCS500 (L and M versions)	iDCS500	Where programming requirements are the same, the term “iDCS” is used in this manual to include both iDCS100 and iDCS500 systems. The term “iDCS500” includes both ‘L’ and ‘M’ versions, unless stated otherwise.
iDCS100	iDCS100	

Programming requirements for these system types are broadly similar, but occasionally there are differences. Not all MMCs apply to all systems, and options available in a given MMC for one system may not be available to another. Bear in mind when programming your system, therefore, that *some of the options listed for an MMC may not appear on your system*.

Users of 408 and 408i systems should also read section [1.6.4, Programming DCS-408 and 408i Systems](#) before starting programming.

The different system types are discussed fully in the separate *Samsung General Description* manuals for each system, where these have been published.

Tenant Programming

Both iDCS500 and DCS (but not CI) systems support two “tenants” which can be separately programmed with different customer data. All other systems support a single tenant only.

Software Version Numbers

The features described in this manual refer to the most recent software versions. Older software versions may not contain all the features or options listed.

1.3 Programming Overview

When the keyphone system arrives from the factory it contains default data. This needs to be customised, using the MMC programs, to suit the customer’s requirements.

Each MMC (Man Machine Code) is assigned a 3-digit code, 100, 101, and so on. These MMCs are used to view, create or change customer data on a display keyphone. This is called KMMC programming.* For example, MMC 601 is used to create a station group; system speed dial numbers are entered in MMC 705; and key functions are assigned to individual keyphones (or “keysets”) using MMC 722.

* Note: PCMMC programming (not covered in this manual) refers to system programming via a PC.

1.4 Programming Levels

There are three levels of programming: System level, Customer level and Station level. System and Customer levels allow system-wide programming and are under passcode protection to restrict access. System programming is done by the system installer (or system technician), usually on a one-off basis, but also to manage any changes in the customer’s requirements. Customer programming is done by the system administrator, on a day to day basis, to manage station users’ requirements. Station level programming does not require a passcode, allowing station users to make simple changes to their keypad features.

To prevent conflicting data from being entered, only one person at a time can enter System or Customer programming. If you attempt to enter programming mode while another keypad is being used for programming, your display shows [xxx PGM MODE] where “xxx” is the keypad extension number of the station in programming mode.

While programming is in progress, normal system operation is not affected. Keypad users

1.4.1 System Level

This level is entered via [MMC 800](#) and requires the installer's (technician's) passcode. This is the highest level and allows access to all system programs, station programs and maintenance programs. The installer (sometimes called the installing technician) also decides which programs are accessible to the customer (the system administrator) at Customer level.

- *All MMCs are accessible at this level.*

1.4.2 Customer Level

This level is entered via [MMC 200](#) and requires the customer's passcode. It allows access to station programs and system programs permitted by the system installer in [MMC 802](#). When the system administrator uses the customer passcode to access station programs, data for all stations can be viewed or changed. Changes can be made either system-wide or to selected keysets. (The system administrator should also refer to the *Samsung System Administration* manual for their keyphone system if this is available.)

- *Accessible MMCs at this level are designated by the installer.*

1.4.3 Station Level

The system administrator or keyset user can access certain programs at a station without using a passcode. At this level, only data for the selected station can be entered or changed. You should refer to the instructions provided in the *Samsung Keyset User Guide* for the keyset you are using.

- *Accessible MMCs at this level are nos. 100–121.*

1.5 Keysets Used for Programming

Programming may be done from any Samsung digital display (LCD) keyset. This may be a DCS (Euro) 6-button (6B), 12-button (12B) or 24-button (24B) keyset or an iDCS Series 28-button (28D), 18-button (18D) or 8-button (8D) keyset. (Refer to the *Samsung Keyset User Guide* for your keyset for a full description.) Two typical examples are shown below.

**28-Button iDCS Series
Keyset**

**24-Button DCS (Euro)
Keyset**

1.5.1 Soft Keys

The three keys directly below the display are called soft keys. The left-hand soft key is designated as the LEFT soft key. This key is used to save any changed data while programming, or to move the cursor to the left on the LCD.

The right-hand soft key is designated as the RIGHT soft key. This key is used to save any changed data while programming, or to move the cursor to the right in the display.

1.5.2 Other Keys

The following keys perform special functions in programming:

VOLUME UP (▲ or +)	Scroll up through available options*
VOLUME DOWN (▼ or -)	Scroll down through available options*
KEYPAD (0–9, *, #)	Enter data and dial options*
HOLD	Clear previous entry
ANS/RLS	Select “ALL” option (e.g. to make data apply to all, rather than selected, stations)
SPEAKER	Store data and advance to next MMC
TRANSFER (OR TRSF)	Enter programming mode, or store data and exit programming mode
SPECIAL KEYS “A–F”	Various functions as described below.

* **Tip:** Many MMCs allow you to select options quickly by dialling codes from the keypad. Alternatively, you can press the VOLUME keys to scroll through and select options. Use whichever method you prefer. Because dialling codes for options may vary between systems, it has not been practical to include them in all of the MMCs listed.

Special Keys “A–F”

[Refer to the following diagrams](#) showing the layout of special keys A–F for different key-sets. During programming, key **A** can be used when entering text, such as names and messages. It allows you to select upper or lower case text. By default, text is entered in upper case; if you press key A, any text you subsequently enter is in lower case. Press the key again and you revert to upper case, and so on. You can mix both cases in a single entry if required.

Keys **B–E** may be used in speed dial programming for inserting special dialling digits in dial strings. Key **F** may be used in certain programs—such as when setting up speed dial numbers—to go to a related program (for example, to set speed dial names associated with speed dial numbers) without the need to close one program and open the next. The A – F key options are described in the relevant MMCs.

DCS (Euro) Keysets

iDCS Series Keysets

1.6 Programming Procedures

1.6.1 Precautions When Programming

- The keyset must be on-hook (handset down) to allow programming.
- Programming is available on any digital keyset with an LCD.
- Programming is available only on digital telephones (not analogue ones).
- If 'INVALID DATA' appears in the LCD while programming, you should re-enter the correct data.
- When you have successfully completed an entry, the LCD automatically changes for the next step.
- Programming halts if you have not pressed a key for a certain period of time (30 seconds by default, but this can be changed).
- Programming halts if you pick up the handset while programming.
- If you pick up the handset while programming, or the telephone plug is pulled out, any new data shown in the LCD are saved.

IMPORTANT

When installing and programming a 'default' system for the first time

You should select the correct software version for your country (e.g. "UK") **before** you can do any other programming via either a keyphone (KMMC programming) or a PC (PCMMC programming). To select the country:

1. Press the Transfer / TRSF key.
2. Enter 800 followed by the default passcode (4321)

The system sounds a warning and displays on the keyset:

ENABLE TECH. PROG
SELECT COUNTRY

Use the VOLUME Up/Down keys to select the country and press the RIGHT soft key. The keyset displays:

DEFAULTING SYSTM
ARE YOU SURE?NO

Use the VOLUME Up/Down keys to select YES and press the RIGHT soft key. When defaulted to the correct version, you can open programming as described next. The country version selected can be changed in [MMC 812 \(Select Country\)](#).

1.6.2 Opening System or Customer Level Programming

To open programming:

1. Press the Transfer / TRSF key.
2. Enter the MMC program number 200 (for Customer level programming) or 800 (for System level programming).
3. Enter the relevant passcode.
4. Press key 1 (or use the VOLUME keys) to select 'ENABLE'.
5. Press the SPEAKER key to have the program selection mode appear (or press the Transfer / TRSF key to halt programming).
6. Enter the MMC number*, or select the program number with the VOLUME keys and press the SPEAKER key.

When you have opened system programming, you are advised to check [MMC 812 \(Select Country\)](#) to ensure that the correct country has been selected before you do any other programming.

Carefully follow the instructions given with each selected MMC to program your system correctly.

1.6.3 Opening Station Level Programming

To open programming:

1. Press the Transfer / TRSF key.
2. Enter the MMC program number.

You can use the MMCs described in this manual as a guide, although it is advisable to refer to the *Samsung Keyset User Guide* provided with your keyset to program it correctly.

1.6.4 Programming DCS-408 and 408i Systems

Although the 408 is physically similar to the 408i in appearance, they operate differently and may have different programming requirements and features. For example, the 408i supports ISDN whereas the 408 does not. Thus, an MMC relevant to one system may not be relevant to the other. Similarly, where an MMC relates to both systems, some features available on the 408i system may not be available on the 408 system, and vice versa. This will be indicated in the MMC description, where appropriate.

These systems also differ significantly from all other keyphone systems, both in size and physical appearance. Remember, when programming your 408 or 408i:

- Extension, group and trunk numbers are two digits by default (e.g. extension 21, trunk 71, etc). Other systems use 3- or 4- digit numbers by default (e.g. extension 201, trunk 701, etc). These numbering plans may be changed using [MMC 724](#).
- You can set up to four 'Normal' station groups in [MMC 601](#). Other group types are not permitted.
- Only two trunk groups, 8 and 9, are available.

Part 2. Program MMC List & Default Data

2.1 Program (MMC) List			
100:	STATION LOCK	315:	SET RELOCATION

⁴UCD Group can only be created from last three Station Groups 507–509

⁵UCD Group can be created from any Station Group

* For iDCS500, the figure quoted is for both M and L version systems. Where these are different, the figure in brackets is for M version systems.

** These are the values for a 3-digit configured system. If configured for 4-digit group numbers, values are 5000–5xxx.

Part 3. MMC Programs

This part contains all the MMC programs provided for your keyphone system, presented in numerical order. The following information should help you when using MMCs.

- The procedure described for a particular MMC may be slightly different on your system and some LCD displays may not be exactly as shown. For example, port numbers may be different for the system you are programming. Refer to section [2.3 System Configuration: Quick Reference](#) in Part 2 for the relevant options for your system.
- 408 and 408i systems employ 2-digit extension and group numbers by default, unlike other systems which use 3- or 4-digit numbers by default. These dialling number plans can be changed by the system installer using MMC 724, so make sure you are aware of all dialling plans for your system.
- To identify which MMCs apply to your system, either refer to the [MMC lists](#) at the beginning of this manual, or locate the relevant MMC page (below) and refer to the header check box beneath the title: a tick (✓) next to a system name indicates that the MMC applies to that system; a cross (X) means it does not apply.
- The procedure described for each MMC assumes you are the installer or system administrator with system-wide access via a passcode. However, MMCs 100–121 are also accessible to individual keyset users. If you are programming your own keyset at Station level, the procedure may be different and you should also refer to your *Samsung Keyset User Guide* for more information.

Always remember that the displays shown for each MMC in this manual are provided as examples, and should be used for guidance only.

Make sure the correct country is first selected in [MMC 812](#) before carrying out any other programming.

MMC: 100

STATION LOCK

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Locks or unlocks an individual station or all stations simultaneously.

The options are:

- | | | |
|---|------------|---|
| 0 | UNLOCKED | Unlocks a locked station (all actions allowed) |
| 1 | LOCKED OUT | Prevents the station from accessing a C.O. line and making an external call |
| 2 | LOCKED ALL | Prevents the station from making or receiving calls |

ACTION

DISPLAY

- Open programming and select **100**
Display shows
- Dial station number (e.g., 205)
OR
Press VOLUME keys to select station
and use RIGHT soft key to move cursor
OR
Press ANS/RLS to select all stations
- Enter 0 to unlock, 1 to lock out or 2 to lock
all (e.g., 1)
OR
Press VOLUME keys to make selection and
press RIGHT soft key to return to step 2
- Press Transfer/TRSF to save and exit
OR
Press SPEAKER to save and advance
to next MMC

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Resets keyset passcodes to their default value of "1234." (This MMC cannot display station passcodes.)

The passcode is used to lock or unlock the keyset for toll restriction (call barring) override and to access the DISA feature.

Note: Default passcodes cannot be used for toll restriction override, DISA access or the walking class of service function.

ACTION

1. Open programming and select **101**
Display shows
2. Dial keyset number (e.g., 205)
OR
Press VOLUME keys to scroll through keyset numbers and press RIGHT soft key to move the cursor right
3. Press HOLD to reset passcode
4. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

CALL FORWARD

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Programs call forward destinations for station users. Also allows call forwarding to be set after the destination has been entered.

The system allows a number of call forwarding options:

FORWARD CANCEL	NO ANSWER
ALL CALL	BUSY/NO ANSWER
BUSY	EXT (external number)

The FORWARD BUSY/NO ANSWER option allows both FORWARD BUSY and FORWARD NO ANSWER options to be activated at the same time, provided that destinations have already been entered for both.

iDCS500 and **iDCS100** systems provide additional forwarding options:

FWD DND (Do Not Disturb)	CFNR (Forward No Response— <i>network only</i>)*
CFU (Forward All— <i>network only</i>)*	CFB/CFNR (see description of Forward Busy/No Answer, above)*
CFB (Forward Busy— <i>network only</i>)*	

* Network options are for forwarding calls to destinations on another system connected to your system's network.

ACTION

1. Open programming and select **102**
Display shows
2. Dial station number (e.g., 205)
OR
Press VOLUME keys to select station and press RIGHT soft key to move cursor
3. Dial 0–5 to select forward type
OR
Press VOLUME keys to select forward type and press RIGHT soft key to move cursor
4. Dial destination number (e.g., 201)
OR
Press VOLUME keys to select destination and press RIGHT soft key to move cursor

MMC: 103**SET ANSWER MODE**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Changes the answer mode of any keyset. Each keyset can have its answer mode set to one of the following:

0. RING: The keyset will ring in one of eight custom ring patterns. Calls are answered by pressing the ANS/RLS key or by lifting the handset.

1. AUTO ANSWER: After giving a short attention tone, the keyset will automatically answer internal calls on the speakerphone*. When a C.O. line is transferred to a keyset in Auto Answer mode, the screened part of the call will be auto answered, but the keyset will ring when the transfer is made unless the user has pressed the ANS/RLS key or lifted the handset.

2. VOICE ANNOUNCE: The keyset will not ring. After a short attention tone, callers can make an announcement but the ANS/RLS key or handset must be used to answer calls.

* Note: To answer C.O. calls automatically on iDCS500 systems, also set ON the option AUTO ANS CO SET in [MMC 110](#).

ACTION**DISPLAY**

1. Open programming and select **103**

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Enters a name, up to 11 characters, to identify an individual keyset. The name will display in the keyset's LCD.

Names are written using the keypad. Each key press moves the cursor and enters the selected character.* For example, if the name is "SAM SMITH", press the number "7" four times to get the letter "S". Now press the number "2" once to get the letter "A". Continue selecting characters from the keypad to complete your name. Press the programmable "A" key to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions).

* Tip: When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=

STATION SPEED DIAL

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Programs personal speed dial numbers for stations. This may be particularly useful for single line telephones which are more difficult to program by the station user.

By default, each station has one block of speed dial locations or “bins” (numbered 00–09) assigned to it. One block can hold up to 10 numbers. However, each station can have up to five blocks of speed dial locations assigned to it—giving a total of 50 numbers (00–49)—in [MMC 606, Assign Speed Block](#).

Each speed dial may contain a trunk or trunk group access code (e.g. 9) followed by a separator (–) and up to 24 digits to be dialled. These dialled digits can be 0–9, * and #. If the system recognises a valid trunk or trunk group access number, it will automatically insert the separator.

The following keys can also be used:

<u>“B”</u>	Insert a flash code “F”
<u>“C”</u>	Insert a pause code “P”
<u>“D”</u>	Insert a pulse/tone conversion code “C”
<u>“E”</u>	Mask/unmask following digits (shows as “[“ or “]”)
<u>“F”</u>	Enter name for speed dial bin (see MMC 106)

(Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

ACTION

MMC: 106 STATION SPEED DIAL NAME

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows a name, up to 11 characters, to be entered for each personal speed dial location. This name enables the speed dial number to be located when the directory dial feature is used. The directory dial feature allows the display keyset user to select a speed dial location by viewing its name.

Names are written using the keypad. Each key press moves the cursor and enters the selected character.* For example, if the name is "SAM SMITH", press the number "7" four times to get the letter "S". Now press the number "2" once to get the letter "A" Continue selecting characters from the keypad to complete your name. Press the programmable **"A" key** to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

* **Tip:** When the character you want is on the same key as the previous character you typed in, press the VOLUME Up key to move the cursor to the right, then select the character.

STATION ON/OFF

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets any of the following keyset features.

AUTO HOLD	Automatically places an existing C.O. call on hold if a CALL key, trunk key or trunk route key is pressed during that call.
AUTO TIMER	Automatically starts the stopwatch timer during a C.O. call. (CALL COST option, below, should be OFF for this feature to work.)
HEADSET USE	When ON, this feature disables the hookswitch allowing a headset user to answer all calls by pressing the ANS/RLS key.
HOT KEYPAD	When ON, this feature allows the user to dial numbers on the keypad without having to first lift the handset or press the SPEAKER key.
KEY TONE	Allows the user to hear a slight tone when pressing keys on the keyset.
PAGE REJOIN	Allows the user to hear the latter part of page announcements if the keyset becomes free during a page.
RING PREFER	When OFF, requires the user to press the fast flashing key to answer a ringing call after lifting the handset.
CALL COST	If enabled (ON), LCD shows real-time call cost based on Metering Pulses arrived. (See AUTO TIMER option.)
AUTO CAMPON	If enabled (ON), station will automatically camp on to dialled extension without user pressing CAMP-ON key (iDCS500 'L' systems only).
AME BGM	Determines whether a station using Answering Machine Emulation will hear their personal greeting or background music (BGM) while callers are listening to the personal greeting. A BGM source must be selected for this to work. (Cadence, SVMi-8 and SVMi-4 voice mail systems only.)
AME PSWD/ PASSCODE	Sets the Answering Machine Emulation password ON or OFF. (Voice mail systems only.)
DISP SPDNAME	If enabled (ON), the speed dial name associated with a speed dial number is displayed on a keyset with LCD when using speed dialling (iDCS500 'L' systems only).
CID REVW ALL	If enabled (ON), saves information on all calls that ring at an extension. If disabled (OFF), saves information only on calls that were not answered at the extension or which were answered by voice mail (iDCS500 'L' systems only).
SECURE OHVA	If enabled (ON), OHVA calls will be heard over the handset, not over the speakerphone (iDCS500 'L' systems only).
NOT CONT.CID	When ON, the keyset displays the call timer for the duration of an incoming trunk call (if AUTO TIMER is ON). When OFF, the CLIP number for a call is displayed for the duration of the call. (Not applicable to 408 systems.)

AUTO ANS CO	If enabled (ON), keyset will automatically answer outside calls through the speakerphone. For this to work, the keyset must be set to Auto Answer mode in MMC 103 . Calls to groups cannot be auto-answered. (iDCS500 systems only.)
AUTO ANS NET	If enabled (ON), keyset will automatically answer outside calls from the QSIG network. For this to work, the keyset must be set to Auto Answer mode in MMC 103 . Calls to groups cannot be auto-answered. (iDCS500 systems only.)

Note: Keyset users can set or change these options for their own keyset (refer to your *Samsung Keyset User Guide* for details).

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets or changes the alarm clock/appointment reminder feature for any station. A number of alarms may be set for each station: three (1–3) for DCS and iDCS systems, or two (1–2) for Compact II, 816 and 408/408i systems. Each alarm may be defined as a one-time or TODAY alarm, or as a DAILY alarm, or NOTSET as described below.

Dial 0: NOTSET

Dial 1: TODAY

Dial 2: DAILY

The TODAY alarm is automatically cancelled after it rings, while the DAILY alarm rings every day at the same time.

ACTION

1. Open programming and select **112**
Display shows
2. Dial station number (e.g., 205)
OR
Press VOLUME keys to select station and
press RIGHT soft key to move cursor
3. Dial alarm number (e.g., 2)
OR
Press VOLUME keys to select alarm and
press RIGHT soft key to move cursor
OR
Press LEFT soft key to return to step 2
4. Enter alarm time in 24-hour clock format
(e.g., 1300)
Display will automatically advance to step 5
5. Dial valid entry from above list for alarm type (e.g.
2, DAILY)
OR
Press VOLUME keys to select alarm type
and press RIGHT soft key to move cursor and
return to step 2
6. Press Transfer/TRSF to store and exit
OR

OPEN CUSTOMER PROGRAMMING

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Opens (enables) or closes (disables) customer-level programming.

If programming is not opened and an attempt is made to access a customer-level MMC, the error message [NOT PERMIT] will be displayed. A four-digit passcode is required to enable customer programming (by default this is 1234, but can be changed in [MMC 201](#), if required). Each digit can be 0–9. When opened, this MMC allows access to all MMCs specified by the system installer in [MMC 802, Customer Access MMC Number](#).

ACTION

DISPLAY

ASSIGN UA DEVICE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns the ringing device to be accessed when a Universal Answer (UA) key is pressed or the UA pickup code is dialed. UA assignment for a group is made in [MMC 601](#), *Assign Station Group*, and then the group is entered here. The UA device can be one of the device types listed below. The device type is automatically determined by the directory number (DN) entered.

DIRECTORY NUMBER (DN)	UA DEVICE TYPE
Station Number	STATION (Keyset or SLT)
Station group number	STATION GROUP
Ring over page number	RING PAGE
Common bell number	COMMON BELL

Note: Only one of the above options can be selected. If the ability to ring more than one item (e.g., all four external page zones) is required, a station group containing all four zone codes must be created.

ACTION

1. Open programming and select **203**
Display shows current assignment
2. Dial DN of UA device (e.g., 205)
OR
Press VOLUME keys to scroll through available devices
3. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Determines whether the common bell relay contacts have an interrupted or continuous closure when activated. If interrupted is chosen, the relay follows an internal ring pattern of one second closed followed by three seconds open.

By default, all common bell relay pairs are assigned as:

DCS	Compact II	816	408 / 408i	iDCS500	iDCS100
380x	363–365	362	361	380x	363–365

ACTION

1. Open programming and select **204**
Display shows current setting
2. Dial common bell number
OR
Press VOLUME keys to make selection of common bell numbers and press RIGHT soft key to advance cursor
3. Dial 0 for continuous or 1 for interrupted operation
OR

DCS	✓	CI	X	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Designates the station that controls the loud bell ring output. This output depends on your system, as follows.

DCS	Trunk A card. Each Trunk A card has one loud bell output; these outputs are given a Directory Number of 3901–3920 as a default value to enable them to be assigned.
Compact II	Misc card (assigned in MMC 219, Common Relay Service Type).
816 and 408/408i	Base board (assigned in MMC 219, Common Relay Service Type).
iDCS500	Misc card. Each Misc card has one loud bell output; these outputs are given a Directory Number of 390x as a default value to enable them to be assigned.
iDCS100	Misc card (assigned in MMC 219, Common Relay Service Type).

The loud bell will follow the ring cadence of the designated station. Only a station can be assigned to control the loud bell; a station group cannot be assigned.

ACTION

1. Open programming and select **205**
Display shows current setting
2. Dial loud bell number (e.g., 362)
OR
Press VOLUME keys to scroll through loud bell numbers and press RIGHT soft key to move the cursor
3. Enter station number (e.g., 201)

BARGE-IN TYPE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: The Barge-In feature allows selected keysets to intrude on other stations which are not set as secure from barge in. This MMC sets the type of barge-in that is permitted.

DIAL	TYPE OF BARGE-IN	DESCRIPTION
0	NO BARGE IN	Barge-in feature is unavailable. Station cannot barge in, regardless of another station's barge-in status.
1	WITH TONE	Barge-in will have an intrusion tone and display at the barged-in on station.
2	WITHOUT TONE	There is no barge-in tone or display at the barged-in on station and the barging-in station will be muted.

ACTION

1. Open programming and select **206**
Display shows
2. Dial 0–2 to select barge-in type (e.g., 2)
OR

ASSIGN VM/AA PORT

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Enables SLI ports to be designated as NORMAL or VMAA.

VMAA ports receive digits designated in [MMC 726, VM/AA Options](#), and also receive a true disconnect signal upon completion of a call. Only SLI cards, not keyset daughterboards, support disconnect signal. Do not make VMAA ports data as this will return them to a single line port and stop voice mail integration. VMAA ports have the equivalent of data protect written in the program and are protected against tones.

Note: This MMC is not used to assign voice mail card ports. Voice mail card ports are assigned as voice mail ports automatically when the system detects a Cadence, SVMi-4 or SVMi-8 card.

ACTION

1. Open programming and select **207**
Display shows
2. Dial station number (e.g., 205)
OR
Press VOLUME keys to select station
and press RIGHT soft key to move cursor
3. Dial 1 or 0 to select port type (1=VMAA,
0=NORMAL)
OR
Press VOLUME keys to select option and press

FEATURE	DESCRIPTION	SYSTEM			
		DCS/CII	816	408/408i	iDCS
DISA PSWD	Determines whether outside customers are required to enter DISA passcode (Yes=ON, No=OFF).	✓	✓	✓	✓
LCR ENABLE	Enables LCR feature in the system.	✓	✓	✓	✓
SMDI VMS SET	Allows SMDI integration through RS-232 port for the external PC-based Voice Mail system	✓	X	X	X
PERI UCD RPT (iDCS only) or PERI UCD SET (other systems)	Periodic UCD information provider. Enables UCD statistics data on a per UCD group basis to print out on the I/O port which has been set as SMDR or UCD REPT in real time (see MMC 501– PERI UCD REPORT timer option). This allows extended manipulation of the information by an external third-party-provided software package. (For iDCS systems, refer to PERI UCD SIO option, below.)	✓	✓	X	✓
CID CODE INS	Allows the digit '1' to be automatically inserted for a toll call. (Not used in UK.)	✓	✓	408i only	✓
DISA MOH	An additional option that can be presented to outside DISA callers: a variable indication provided by an MOH source instead of a fixed DISA dial tone.	✓	✓	✓	✓
TRANSFER MOH	Callers who have been transferred from an extension or UCD group or AA group will hear MOH, until answered by the called extension, instead of ring back tone.	✓	✓	✓	✓
DSP SSPDNAME	LCD displays programmed name of system speed bin if it has been programmed in MMC 706 ; otherwise, it shows digits programmed in MMC 705 (even if this option is set to ON). [Note: iDCS500 'L' systems use DISP SPDNAME option in MMC 110.1]	✓	✓	✓	iDC500 'M' & iDC100 only
DID BSY ROUT	DDI calls to a busy extension can be routed to an assigned destination, in MMC 406 , before the call is dropped.	✓	✓	408i only	✓
DID NOT ROUT	DDI calls with no mapping in MMC 714 can be routed to an assigned destination in MMC 406 .	✓	✓	408i only	X
ALARM MOH	If the Wake-up Announcement feature (MMC 224) is not programmed but this option is turned ON, the user will hear the station Music-On-Hold source as a wake-up alarm.	X	X	X	✓
ALL PICK UP	Independent pickup group; can pick up all calls.	X	✓	✓	X
RECALL PIKUP	When ON, a call recalling to a station can be picked up using Direct Station Pickup, Group Pickup and My Group Pickup features. This applies to held calls and transferred calls recalling to a station.	X	X	X	✓
ICM EXT FWD	When ON, call forward external is allowed when internal calls are placed to a station that has Call Forward External programmed and set.	X	X	X	✓

FEATURE	DESCRIPTION	DCS/CII	816	408/408i	iDCS
SEC 2 BOS AA	Allows or denies calls from a secretary to a boss station being auto answered by the boss station. The default setting is ON allowing auto answer when a secretary calls a boss via an assigned boss key.	X	X	X	✓
DID ERR TONE	Provides error tone when an invalid DID number is received.	X	X	X	✓
KTS DISC ALM	When ON, generates system alarm when a keyset plug is connected or disconnected.	X	X	X	✓
OFF HOOK ALM	When ON, generates system alarm when a phone maintains off-hook condition longer than timer (First Digit timer in MMC 501)	X	X	X	✓
SL SELF RING	When ON, generates a 10-second ring when a single line phone dials its own number and hangs up (testing).	X	X	X	✓
SGR INC BUSY	When ON, generates busy tone when all station group members are busy for a group call.	X	X	X	✓
TRSF CANCEL	When OFF, an SLT will be able to handle two calls simultaneously using hookflash to toggle between them. When ON, an SLT will be able to connect to the second call, but pressing hook flash will not toggle between the two calls; it will disconnect the second call and reconnect the SLT to the first call.	X	X	X	✓
RECALL DISC	When ON, the system disconnects a transferred call when it recalls.	X	X	X	✓
ARD TONE CHK	When system detects CO BUSY TONE from Central Office, it returns to autoredial state.	✓	✓	✓	✓
VPN ENABLE	Allows use of VPN (Virtual Private Network) feature linked with network. (For future use.)	✓	✓	408 only	✓
ISDNTRK BUSY	Allows return of busy tone to incoming DDI calls to station group if all group members are busy. (Sequential or Distribute groups only.)	✓	✓	408i only	X
IN TOLL CHK	If ON, toll restriction applies to incoming calls (useful for DISA calls breaking out of system)	✓	✓	✓	✓
ISDN PROGCON	If OFF, the system ignores ISDN progress message.	✓	✓	408i only	✓
INCLUDE VAT	When ON, an "Inclusive VAT of" line is printed on Hotel invoices (Hotel application).	✓	X	X	✓
DSS KEY DPU	When ON, pressing a DSS key will pick up a call at the ringing station	X	X	X	✓
BEGN DGT DSP	When ON, and an outside call of more than 16 digits is dialled, then only the first 16 digits dialled are shown on the keyset display. When OFF, only the last 16 digits dialled are shown (iDCS500 'L' systems only.)	X	X	X	iDC500 'L' only
ONE TCH FACC	Must be set ON in order for keyset users to be able to use one-touch account code key	X	X	X	iDC500 'L' only

FEATURE	DESCRIPTION	DCS/CII	816	408/408i	iDCS
SGR ALL OUT	Normally, a group member cannot leave a group unless there is a member still in the group. If this option is set ON, the last member is also able to leave the group.	X	X	X	✓
CHAIN FWD	If ON, an incoming call forwarded from a station to another station may then be forwarded to the mailbox of the second station, if the latter is set for 'forward to voice mail'. If this option is OFF, the call may only be forwarded to the mailbox of the first station.	X	X	X	iDC500 'L' only
TRK MONITOR	If ON, the system will monitor the trunk supervision signalling. That is, if a disconnection signal is received from the exchange, the call will be cleared and the extension will go back on hook.	✓	✓	✓	✓
VOIP MFRALOC	If ON, this allocates a DTMF receiver for a VOIP tandem caller breaking out on another trunk group.	X	X	X	✓
NTWK AUTOTMR	If OFF, the call timer in the phone display will not function if the call is from a network connection (Q-Sig)	X	X	X	✓
USE EURO	If ON, the unit of currency shown in call displays and on SMDR reports will be Euros (€). (This will also display on Hotel application invoices.)	✓	X	X	✓
NO STAFF CODE	(Hotel application.) If ON, no staff codes will be required for Hotel administration.	✓	X	X	✓
PERI UCD SIO	If set OFF, periodic UCD report will print to port set as PERI UCD in MMC 804 If set ON, periodic UCD report will print to port set as PERI UCD in MMC 804. If there is no PERI UCD port, periodic UCD report will print to port set as UCD REPT or SMDR/UCD.	X	X	X	✓
AUTO CLEANED	If ON, any room checked out will be automatically flagged with status "Cleaned". (Hotel application.)	✓	X	X	✓
REDIAL REVW	If ON, when the Redial or LNR key is pressed, keyset users can review previously dialled numbers in the display and select numbers to redial.	X	X	X	✓
ISDN KEYFAC	If ON, allows Keypad Facility messages to be sent to the exchange to invoke network features	✓	✓	408i only	✓
PROG.2 ALERT	Converts a received Progress message to an Alert message when tandem switching.	X	X	X	✓
VOIP VIR RBT	If ON, the local system will generate Ring Back tone when the remote system sends the Alerting message.	X	X	X	✓
PRESET BUSY	If ON, will change the preset Forward condition in MMC 320 from Forward No Answer to Forward Busy/No Answer.	X	X	X	✓

MMC: 211 DOOR RING ASSIGNMENT

MMC: 212 ALARM RINGING STATION

DCS	✓	CI	X	CII	✓	816	X	408	X	408i	X	iDCS500	X	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Determines which devices will be alerted when an alarm sensor is activated. Devices can be stations or station groups.

Devices will ring like a doorphone and follow the door ring time-out. When ringing, display keysets show the display assigned in [MMC 213, Alarm Message](#). The bottom line of the keyset display gives an option to clear the alarm. Ringing initiated by an alarm sensor is answered by going off-hook and on-hook again at a ringing keyset.

If a device such as Ring Over Page or a common bell is the only device assigned to ring, it may be answered by assigning a direct pickup key with this device as the extender. If the alarm is unanswered by the door ring time-out, ringing will cease but the display will remain until cleared by dialling the alarm clear feature code (57) and passcode (default 8765).

■ For DCS and CII systems

ACTION

1. Open programming and select **212**
Display shows first sensor (e.g. 3501)
2. Dial sensor number (e.g., 3502 or 352)
OR
Press VOLUME keys to scroll through sensor numbers and press RIGHT soft key to advance cursor
3. Enter destination for day (e.g., 205)
OR
Press VOLUME keys to make selection and press RIGHT soft key to advance cursor

Select night destination in the same way
4. Press Transfer/TRSF to store and exit
OR

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns a name to an alarm sensor. Names are written using the dial keypad. Each press of a key selects a character and moves the cursor to the next position. For example, if the sensor name is "FIRE," press the number "3" three times to get the letter "F." Now press the number "4" three times to get the letter "I", and so on to complete the name. Press the programmable ["A" key](#) to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

Tip: When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

MMC: 215 VOICE DIALLER OPTIONS

DCS	✓	CI	✓	CII	✓	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns the VDIAL card with two (2) channels and seven (7) users or one (1) channel and five (5) users. When changing channel size, you will be prompted to 'clear RAM'. This is only for the Voice Dialler, not the system, and will prevent accidental usage of pre-recorded names. It is advised that you clear RAM before assigning users in [MMC 216, Voice Dialler Assignments](#).

VDIAL cards are numbered with odd numbers. For example, the first VDIAL card in the system is numbered either 3551 or 355. The second channel, if used, will be numbered 3552 (or 356). The second VDIAL card is numbered 3553 (or 357), and a second channel 3554 (or 358). If only one channel is assigned, the even number 3552 or 3554 (356 or 358) will not appear in MMC 216.

Options 0 : 2CH-7USER-20BIN (7 USERS)
 1 : 1CH-5USER-40BIN (5 USERS)

ACTION

MMC: 217 TRAFFIC REPORT PRINTOUT

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with a LAN interface only. For Compact I CCC Option, see [MMC 217](#), below.)

The system can store statistics for various types of call made throughout the day and print them as a “traffic” report when required. This MMC allows you to print a report using selected criteria. The traffic report can be printed either on demand (manually) or automatically every hour, at a programmed time each day, or for up to three separately timed shifts.

For ‘on-demand’ printing, select MANUAL PRINTOUT. Then select one of the following options:

PRINT AND CLEAR	A report is printed and all totals are reset to 0 (zero).
PRINTOUT ONLY	A report is printed and all the totals are saved.
CANCEL PRINTOUT	Cancels printout.

For ‘automatic’ printing, select AUTO PRINT OPTN. Automatic printing will always clear the totals (set them to zero) when finished. Select one of the following options:

AUTO PRINT OFF	Automatic print feature is disabled.
DAILY HHMM:	A report is printed at the programmed time each day. Enter the time in 24-hour clock format (e.g. “HHMM:2359” is 11.59pm)
EVERY HOUR MM:	A traffic report will be printed every hour at the programmed minutes past the hour (e.g. “MM:30” is 30 minutes past the hour).
THREE TIME SHIFT	Up to three separate Start and End times may be programmed to report traffic within certain times of a day. A report is printed at each End time. Shifts are displayed as 1S, 2S and 3S. For each shift required, enter a start (S) time and an end (E) time in 24-hour clock format, e.g.

TRAFFIC REPORT
1S:S:0800 E:1259

TRAFFIC REPORT
2S:S:1300 E:1759

TRAFFIC REPORT
3S:S:1800 E:2200

In this example, reports are printed for three shifts, 8.00am–12.59pm, 1.00pm–5.59pm and 6.00pm–10.00pm.

When a report is printed, the totals represent call statistics accumulated between the date and time printed as “BEGINNING:” and the date and time printed as “ENDING:”. (For a sample report, refer to the *Samsung General Description* manual for your system.)

Note: If there are no trunks in a group, the trunk group report for that group will not print.

ACTION

1. Open programming and select **217**
Display shows
2. Press VOLUME keys to select MANUAL or AUTO
and press RIGHT soft key
3. Press VOLUME keys to select option and press

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel application only.)

Defines stations for a specific use. Each telephone can be designated as one of the six types defined below. These types can be changed by dialling the type number (0–5) or by scrolling through the types and pressing the right soft key to select the type desired.

0 NORMAL STATION

This is the default setting. The station will operate in the normal manner associated with this type of station. Ports designated as VMAA in [MMC 207](#) must be designated as 'normal' in this MMC.

1 GUEST SMOKING

When a station is designated as this type it will appear in room status and check-in features as a smoking room.

2 GUEST NO SMOKING

When a station is designated as this type it will appear in room status and check-in features as a non-smoking room.

3 MEETING ROOM

Stations designated as Meeting Rooms will have the same attributes as guest rooms with regard to cleaning and occupied status but will not show up while scrolling through room status lists.

4 ADMINISTRATOR

Only stations designated as Administrator stations can use Hotel features such as check in, check out, billing, etc.

5 FAX STATION

When a station is designated as a fax station it can be assigned as a 'pair' station to a Guest Smoking Room or Guest No Smoking Room in [MMC 222](#).

MMC: 224 WAKE-UP ANNOUNCEMENT

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	X
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel Application on iDCS500 systems only.)

Designed to enhance the Wake-Up (alarm) feature. The feature requires that an Automated Attendant (AA) card be installed in the system if a wake-up message is to be programmed. The system can be programmed to play the recorded message when a guest answers a wake-up call. The system accesses the message selected in this MMC: it can be one of the customized messages (01-48) recorded on the AA card, or one of the pre-recorded ROM messages (49-64).

There are three options.

AA GROUP	Determines which AA group will be connected when a Wake-Up call is answered.
MESSAGE NO	Determines which message will be played when a Wake-Up call is answered. Can be a custom-recorded message, 01-48, or one of the pre-recorded messages, 49-64.
GROUP BUSY	Determines which tone source will be connected when all AA group members are busy. This destination can be NONE, TONE or external music-on-hold. If NONE is set, dial tone is connected; if TONE is set, hold tone is connected.

Note: This feature can be accessed without an AA card installed. However, rather than providing a wake-up message, you can play only music-on-hold (MOH) as a wake-up announcement. In this case, you should select MOH as the source in the Group Busy option. Assign an AA Group (with no members) and enter any Message No.

ACTION

1. Open programming and select **224**
Display shows
2. Press RIGHT soft key to move cursor
Enter group number (e.g. 520)
OR
Press VOLUME keys to select and press RIGHT soft key
3. Press RIGHT soft key to move cursor

CUSTOMER ON/OFF PER STATION

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows the following features to be enabled or disabled on all or individual stations. (Some may not be available on your system.)

ACCESS DIAL	Determines whether a user can select a trunk or trunk group by dialling its directory number (DN). <i>This selection should be turned OFF when using LCR.</i>
MICROPHONE	Allows keyset to be used in speakerphone mode.
OFFHOOK RING	Allows a short burst of ring tone to indicate another call.
SMDR PRINT	When this is set OFF, C.O. calls to and from the station will not print on SMDR. This includes transferred calls or calls picked up from hold or park.
TGR ADV.TONE	When this feature is set to ON, a warning tone will be heard each time LCR advances to the next route.
VMAA FORWARD	When this feature is set to ON, calls can be forwarded to voice mail.
NGT PASSCODE	Enables/disables requirement for passcode when invoking night service.
INTRCOM SMDR or STN CALL PRT	When set OFF, the station will not print internal calls on SMDR.
FWD DLY USE	When this feature is set to ON, calls will overflow to the Forward No Answer destination when the Forward No Answer timer expires even when the Forward No Answer feature is not activated at the called party extension. Set the Forward No Answer destination in MMC 102, Call Forward , but do <i>not</i> enable the feature. (Alternatively, use code 603 plus the station number, then code 600 to cancel the feature.)
FWD OVERRIDE	When set ON, the station overrides the call forward feature set on a called extension. (Used for operator positions.)
RCL TO OPER	Used for an operator's extension and in conjunction with a CTI operator's console. If a transferred call from an extension is returned as unanswered, it will return to the operator group and not the extension transferring the call.

MMC: 301 ASSIGN STATION COS

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns a class of service (COS) to each station. A number of different classes of service can be defined in [MMC 701, Assign COS Contents](#):

30 (01–30) for DCS, Compact II and iDCS systems;

10 (01–10) for 816 systems;

4 (1–4) for 408/408i systems.

For iDCS systems, a COS can be assigned to any or all of the six ring plans defined in [MMC 507, Ring Plan Time](#). *For all other systems*, a COS can be assigned to both Day and Night modes. Night mode is defined in [MMC 507, Assign Auto Night Time](#).

(Note: There are two separate versions of MMC 507: one for iDCS and one for other systems.)

■ For all systems except iDCS

ACTION

1. Open programming and select **301**
Display shows
2. Dial station number (e.g., 205)
OR
Press VOLUME keys to scroll through stations and press RIGHT soft key to advance to step 3 to enter Day COS
OR
Press VOLUME keys to scroll through stations and press LEFT soft key to advance to step 4 to enter Night COS
OR
Press ANS/RLS to select all stations
3. Enter day class of service (e.g., 05)
OR
Press VOLUME keys to scroll through classes of service and press RIGHT soft key to advance to step 4 to enter Night COS
OR
Press VOLUME keys to scroll through classes of service and press LEFT soft key to return to step 2 to enter other stations

MMC: 303 ASSIGN BOSS/SECRETARY

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns BOSS stations to SECRETARY stations. One BOSS station can have up to four SECRETARY stations, and one SECRETARY station can have up to four BOSS stations.* A dedicated BOSS key must be programmed on the SECRETARY keyset(s). A dedicated BOSS key must also be programmed on the BOSS keyset(s).

*Note: For 408/408i systems, a BOSS station can have up to two SECRETARY stations, and vice versa.

The ["F" key](#) is used to toggle the BOSS/SECRETARY field. (See key layouts in Part 1, [section 1.5.2.](#))

ACTION

1. Open programming and select **303**
Display shows

(If you want to set up the boss stations for a selected secretary station, press the [F key](#) to change the display to SECR STN. The following example describes setting up secretary stations for a selected boss station, but the procedure is the same for both.)

2. Dial BOSS station number (e.g., 205)
OR
Press VOLUME keys to select station and press RIGHT soft key

3. Dial SECRETARY station number (e.g., 201)
OR
Press VOLUME keys to select station
Press RIGHT soft key to return to step 3 to enter more SECR numbers

4. Press LEFT soft key to return to step 2 and continue entries

ASSIGN BACKGROUND MUSIC SOURCE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns a background music (BGM) source to keysets.

DCS	At least one Trunk A card must be installed. 19 music selections are possible, depending on the number of Trunk A cards. One music source is provided per card. The default directory number of a BGM source is 3701–3719. (Internal music is always the odd numbered address, e.g. 3701, 3703.)
Compact II	Two possible music selections, depending on whether a Misc card is installed. One music source is provided on the base board (switch select internal/external); the other external source is provided on the Misc card. The default directory number of a BGM source is 371–372. (Internal music is always address 371.)
816 and 408/408i	There is a music source on the base board (switch select internal/external). The default directory number of a background music source is 371.
iDCS100	Two possible music selections, depending on whether a Misc card is installed. One music source is provided on the base board (switch select internal/external); the other external source is provided on the Misc card. The default directory number of a BGM source is 371–372.
iDCS500	Six possible music selections depending on the number of Misc daughterboards installed. The default directory number of a BGM source is 370x.

Additionally, for any system, you may select an Auto Attendant (AA) port to provide continuous play of a specific recording. The AA port selected must be the last port on the card. If selected, the BGM source will be the message defined in [MMC 736](#) from the port defined in this MMC.

For example, if this MMC selects the music source for station 201 as 384 (the last port on the AA card) and MMC 736 selects message 20 for the AA card, extension 201 will hear message 20 from the installed AA card.

If you have a Voice Mail System installed you may also select a VM recording as a music source. The recording must already been defined in [MMC 756](#) and will show up here as the VM port assigned with the recording.

ASSIGN PIN CODE

DCS	X	CI	✓	CII	X	816	X	408	X	408i	X	iDCS500	X	iDCS100	X
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Compact I systems only. This MMC is related to 131 Cable & Wireless service.)

Assigns individual users to PIN codes in the system. For Cable & Wireless 131 service there is a maximum of four PIN codes allocated in the system, so users must be assigned to the PIN code used when dialling out on a Cable & Wireless Network.

ACTION

1. Open programming and select **313**
Display shows
2. Dial the station number (e.g., 205)
OR
Press VOLUME keys to select station
and press RIGHT soft key to advance to step 3
3. Enter the pin code serial number (1, 2, 3 or 4)
e.g. 1
4. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next

SET RELOCATION

DCS	✓	CI	X	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Used to exchange information associated with two stations or add-on modules (AOMs). All individual station assignments such as trunk ring, station group, station COS, station speed dial and key assignments are swapped. A user can then relocate to the new station and operate it exactly like their original station. The stations being exchanged must be idle for this program to work, and programming done from a different keyset.

There are two important rules to follow:

1. You cannot exchange DCS (Euro) keysets with iDCS series keysets.
2. Generally, you can only exchange keysets or AOMs of the same type (e.g. 6B with 6B, 48B with 48B).

However, there are exceptions to the second rule:

- You can exchange a Euro 12B for a Euro 24B keyset, and vice versa.¹
- You can exchange an iDCS 18D for an iDCS 28D keyset, and vice versa.²
- You can exchange a DCS 48B AOM for an iDCS 64B AOM, and vice versa.³

[Refer to the table](#), below, to determine which devices can be exchanged. Attempting to exchange incompatible devices will result in an error message display ("INVALID DATA").

Note:

¹ If you are exchanging a Euro 12B and 24B keyset, be aware that the 12B keyset will assume the key assignments for the first 12 keys on the 24B keyset. Conversely, the first 12 keys on the 24B keyset will assume the key assignments for the 12B keyset.

² If you are exchanging an iDCS 28D and 18D keyset, remember that for 18D keysets the first 10 programmable keys are numbered 01–10 and the last eight keys are numbered 21–28 (*not* 11–18). When you exchange 18D and 28D keysets you copy keys 01–10 to keys 01–10 and keys 21–28 to keys 21–28. Keys 11–20 on 28D keysets will not be copied.

³ If you are exchanging a 48B AOM and a 64B AOM, the 48D keyset will assume the key assignments for the first 48 keys on the 64B AOM. Conversely, the first 48 keys on the 64B AOM will assume the key assignments for the 48B AOM. You must first remove any association with master stations, using MMC 209, otherwise an error message will be displayed ("ERROR:AOM MASTER").

Exchange Allowed Table	SLT	DCS (EURO) 6B	DCS (EURO) 12B	DCS (EURO) 24B	DCS 48B AOM	iDCS 64B AOM	iDCS 28D	iDCS 18D	iDCS 8D

PRESET FORWARD NO ANSWER

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems only.)

Assigns a default destination for Forward No Answer (FNA) to each station on the system. These destinations may be different for each station or they may be the same. A destination can be designated as valid for internal (INT) calls or external (EXT) calls, or both (BOTH). This FNA destination will be temporarily overwritten if the station user enters a different FNA destination on their phone. If the user cancels the new destination, this preset destination will once more be in effect.

Preset FNA time follows the [Station No Answer Forward timer \(MMC 502\)](#). Refer also to the [Preset Busy option in MMC 210](#).

ACTION

1. Open programming and select **320**
Display shows
2. Dial station number (e.g., 205)
OR
Press VOLUME keys to select station and
press RIGHT soft key to move cursor
OR
Press ANS/RLS for all stations
3. Dial destination number (e.g. 549)
OR
Press VOLUME keys to select destination and

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (*iDCS systems only.*)

Allows a number (16-digit maximum) to be entered and associated with a station number on a per-PRI/BRI basis. When this station makes an outgoing call, the number entered will be the CLIP number sent. Numbers are entered into a table. There are four tables for an *iDCS500* 'L' system and two for other *iDCS* systems.

If no entry exists in a table for a station, the system uses the number for the trunk entered in [MMC 405 Trunk Number](#) as the CLIP number to send.

ACTION**DISPLAY**

1. Open programming and select **323**
Display shows
2. Dial station number (e.g., 205)
OR

CUSTOMER ON/OFF PER TRUNK

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns the following options on a per-trunk basis.

OPTIONS

- | | | |
|---|---------------|---|
| 0 | 1A2 EMULATE* | Trunk override call (NO PRIVACY) |
| 1 | TRUNK INC DND | Allows trunk to override DND (DIL) |
| 2 | TRUNK FORWARD | Allows trunk to be forwarded |
| 3 | LCR ALLOW | Allows LCR to be switched ON/OFF when a trunk is directly accessed. |
| 4 | EFWD EXT CLI | External forward external CLI number (on/off). |

Set OFF:

If incoming external call includes CLI, this is sent to the external forward destination. If incoming external call does not include CLI, the CLI number of the forwarding station is sent to the external forward destination.

Set ON:

Only the CLI number of the forwarding station is sent to the external forward destination.

* Note: '1A2 Emulate' means that other stations (up to a total of four) can join an existing trunk conversation by pressing the DTS key for the trunk on their keyset

ACTION

1. Open programming and select **400**
Display show
2. Dial trunk number (e.g. 704)
OR
Press VOLUME keys to select trunk
OR
Press ANS/RLS for all trunks and press RIGHT soft key to move cursor to options
3. Dial option number from above list (0–4, e.g. 2)
OR

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows a number, up to 11 digits, to be entered to identify an individual trunk.

Numbers are entered using the keypad. Pressing a key selects a digit and moves the cursor to the next position.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

ACTION

1. Open programming and select **405**
Display shows
2. Dial trunk number (e.g., 704)
OR
Press VOLUME keys to select trunk and press
RIGHT soft key to move the cursor
3. Enter the identifying trunk number
4. Press RIGHT soft key to return to step 2
OR
Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 408**ASSIGN TRUNK MUSIC-ON-HOLD SOURCE**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Selects which Music-On-Hold (MOH) source can be heard on each trunk. The possible selections are: TONE, NONE, internal or external (customer-provided MOH source).

DCS	At least one Trunk A card must be installed. 19 music selections are possible, depending on the number of Trunk A cards. One music source is provided per card. The default directory number of a music source is 3701–3719. (Internal music is always the odd numbered address, e.g. 3701, 3703.)
Compact II	Two possible music selections, depending on whether a Misc card is installed. One music source is provided on the base board (switch select internal/external); the other external source is provided on the Misc card. The default directory number of a music source is 371–372. (Internal music is always address 371.)
816 and 408/408i	There is a music source on the base board (switch select internal/external). The default directory number of a music source is 371.
iDCS100	Two possible music selections, depending on whether a Misc card is installed. One music source is provided on the base board (switch select internal/external); the other external source is provided on the Misc card. The default directory number of a music source is 371–372.
iDCS500	Six possible music selections depending on the number of Misc daughterboards installed. The default directory number of a BGM source is 370x.

Additionally, for any system, you may also select an Auto Attendant (AA) port to provide continuous play of a specific recording. The AA port selected must be the last port on the card. If selected, the music source will be the message defined in [MMC 736](#) from the port defined in this MMC.

For example, if this MMC selects the music source for station 201as 384 (the last port on the AA card) and MMC 736 selects message 20 for the AA card, extension 201 will hear message 20 from the installed AA card.

If you have a Voice Mail System installed you may also select a VM recording as a music source. The recording must already been defined in [MMC 756](#) and will show up here as the VM port assigned with the recording.

ACTION

1. Open programming and select **408**
Display shows current setting

MMC: 410**ASSIGN DISA TRUNK**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows the system to have Direct Inward System Access (DISA). Because there is a possibility that unauthorised calls will be made via this feature, several safeguards have been added. Users must be informed of these to prevent unnecessary service calls. DISA can lock out when a predetermined number of invalid consecutive calls are attempted. Callers will then receive ring back tone until a programmable timer has expired. The * key may be used to initiate new dial tone while in a station-to-station call. The # key may be used to terminate the DISA call and disconnect the central office line. Multiple central office calls and internal calls are possible.

Note: In order to use DISA, the caller must first dial a valid station number, followed by a four-digit passcode. This passcode is defined in [MMC 101, Change User Passcode](#). DISA users MUST change this passcode as the default number cannot be used.

■ For all systems except iDCS

DISA can be made available in day mode, night mode or both

FEATURE KEYS

0	NORMAL	No DISA service
1	DAY	DISA is available in day mode
2	NIGHT	DISA is available in night mode

MPD/PRS SIGNAL

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Used on a per-trunk basis to define if a C.O. line is to be either a Metering Pulse Detection (MPD) or a Polarity Reversal Signal (PRS) trunk. (PRS is not available in the UK.)

A Meter Pulse Trunk will detect a C.O.-provided meter pulse. A Polarity Reversal trunk will detect the line reversal signal which may be provided by the C.O. when the other party answers the outgoing call or the outside party clears the call. If the trunk is designated as PRS detection, the call duration timer will be started and the results printed on the SMDR record. PRS detection is also essential for dropping a trunk-to-trunk conversation which is unsupervised by an internal party.

ACTION

1. Open programming and select **414**
Display shows
2. Enter desired trunk number (e.g. 705)
OR
Press VOLUME keys to select trunk and use LEFT or RIGHT soft key to move cursor
3. Press VOLUME keys to scroll through options and use LEFT or RIGHT soft key to return to step 2

Purpose: (This version of MMC 416 is not valid for systems other than iDCS. For other systems, refer instead to [MMC 416, Assign AC15 Translation](#), above.)

Defines which ring destination table an E&M or DID trunk will follow for incoming calls. There are three options for each trunk:

- | | |
|--------------------|--|
| 0 FOLLOW INCOM DGT | When a trunk is set to this option calls will ring at the destination that matches the digits received from the C.O. (Follows MMC 406) |
| 1 FOLLOW DID TRANS | When a trunk is set to this option calls will ring at the destination defined in MMC 714 that matches the digits received from the C.O. |
| 2 FOLLOW TRK RING | Calls will ring at the destination defined in MMC 406 for that trunk. If the destination defined in MMC 406 is a VMAA port or group, the system will repeat the digits received from the C.O. to the port when it answers.

If you select this option, press the right soft key and "NUM OF DGT:" will appear in the display. Enter the number of incoming digits from the C.O. (0–4). |

ACTION

MMC: 419

BRI OPTIONS

DCS	✓	CI	✓	CII	✓	816	✓	408	X	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: This MMC comprises two groups of options. One group is for the "TRUNK" ports and the other is for the "STATION" ports as set in [MMC 423, S/T Mode](#). **Be aware that some options may not be available on your system.**

Note:

- 1 For each BRI access, two adjacent ports are assigned. You need only change the value for one of the two ports; the value for the other port will be changed automatically.
- 2 If changes are made using this MMC, the BRI card affected must be restarted using [MMC 418, Card Restart](#).

Ports Programmed as "TRUNK" in MMC 423

Display shows "BRI-TRK". Items to select include some or all of the following: CHANNEL ANY, BRI MODE, DLSEND, BRI CODING, CLIP TABLE and NB TYPE.

- **CHANNEL ANY**

This field can be set to YES or NO and is referenced when a user attempts an outgoing call while that port is busy.

If CHANNEL ANY is NO, the user hears busy tone.

If CHANNEL ANY is YES, the system checks if the adjacent port (another B channel in the same BRI access) is free. If it is free, the user can call through that port. Otherwise, the user hears busy tone.

- **BRI MODE**

P-P DDI: When BRI line is point-to-point configuration and is a DDI line. Incoming calls are placed as set in [MMC 714 \(DDI Number & Name Translation\)](#). All incoming calls through the DDI trunk will be placed according to the setting of the DDI table.

P-M NOR: When BRI line is point-to-multipoint configuration and is not an MSN line. Incoming calls are placed as set in [MMC 406 \(Trunk Ring Assignment\)](#).

P-M MSN: When BRI line is point-to-multipoint configuration and is an MSN line. The system can manage up to eight MSN numbers for each MSN BRI access. Incoming calls through P-MP MSN ports are handled as set in [MMC 421 \(MSN Digit\)](#). Each BRI access requires its own table.

P-P NOR: When BRI line is point-to-point configuration and is not a DDI line. Incoming calls are placed as set in [MMC 406 \(Trunk Ring Assignment\)](#).

- **DLSEND**

This field is provided to set the dial sending mode to "enblock" or "overlap" on an individual port basis. If enblock, digits are sent in a single block; if overlap, digits are sent as they dialled.

- **BRI CODING**

A-LAW or U-LAW (A-LAW in UK)

- **CLIP TABLE**

Used to select the CLIP number to send to the network. If NONE is selected, the trunk number set in [MMC 405 \(Trunk Number\)](#) is sent to the network. Otherwise, the number entered in [MMC 323 \(Send CLIP Number\)](#) corresponding to the number set here is sent to the network.

- **NB TYPE**

Changes the number type field of the set-up message for the CLIP number sent to the network. Options are UNKNOWN and INT NAT (International).

Ports Programmed as "STATION" in MMC 423

Display shows "BRI-STN". Items to select include some or all of the following: CHANNEL ANY, POWER FEED and BRI CODING.

- **CHANNEL ANY**

(See above.)

- **POWER FEED**

This field determines if power to a BRI access will be supplied (YES or NO).

- **BRI CODING**

A-LAW or U-LAW (A-LAW in UK)

In BRI-STN, options DLSEND and BRI MODE are not included because the system uses implicit data for these: enblock for DLSEND and P-MP for BRI MODE.

ACTION

1. Open programming and select **419**
Display shows
2. Dial BRI trunk number (e.g. 703)
OR
Press VOLUME keys to select the port
For TRUNK ports (TRK), go to step 3.a
For STATION ports (STN), go to step 3.b
- 3.a Display is as shown for TRUNK ports
Use the RIGHT soft key to position the cursor under CHANNEL ANY

PRI OPTIONS

DCS	✓	CI	X	CII	✓	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows the system DDI/NORMAL access and sets dial sending mode (DLSEND) on an individual port basis to OVERLAP or ENBLOCK. However, if you change the dial sending mode of one port, all other ports must be set to the same dial sending mode. **Be aware that some of the following options may not be available on your system.**

OPTIONS

CHANNEL ANY: If set to YES, when a call is initiated the channel used is specified by the network; if set to NO, when a call is initiated the system will specify which channel to use.

PRI MODE: If your PRI line is not registered for DDI service at the Central Office, you can use NORMAL service (e.g. subaddress or normal trunk incoming service). If you set PRI MODE to DDI, you can service DDI (Direct Dial Inward) to a specific station or station group according to DDI NUMBER TABLE.

DLSEND: Overlap or enblock. If enblock, digits are sent in a single block; if overlap, digits are sent as they dialled.

CLIP TABLE: Used to select the CLIP number to send to the network. If NONE is selected, the trunk number set in [MMC 405 \(Trunk Number\)](#) is sent to the network. Otherwise, the number entered in [MMC 323 \(Send CLIP Number\)](#) corresponding to the number set here is sent to the network.

NB TYPE: Changes the number type field of the set-up message for the CLIP number sent to the network. Options are UNKNOWN and INT NAT (International).

Note: If changes are made using this MMC, the PRI card affected must be restarted using [MMC 418, Card Restart](#).

ACTION

1. Open programming and select **420**
Display shows
2. Dial PRI trunk number (e.g. 704)
OR
Press VOLUME keys to select the port
Press the RIGHT soft key to move the cursor
3. Press VOLUME keys to make selection (CHANNEL ANY, PRI MODE or DLSEND) and press RIGHT soft key to move the cursor
4. Press VOLUME keys to make selection and press RIGHT soft key to return to step 2

MSN DIGIT

DCS	✓	CI	✓	CII	✓	816	✓	408	X	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns an incoming MSN call to a specific station. If any entry in MSN DIGIT TABLE matches an incoming call's called party number, either the specific station is alerted, if it is programmed to accept the call, or the call is cleared if it is programmed to reject the call.

If the incoming called party number does not have a matching entry in the MSN table, the operator is alerted.

You can give each MSN number to a specific station and you can select a call waiting option: when a destination is busy, the incoming call must be cleared or camped-on to the station (which is alerted to the call).

There is a total of eight entries on a trunk basis and each entry consists of the following fields:

DIGITS	Digits to be received (maximum of 10).
DAY DEST*	Destination in day mode - can be a station or a station group.
NIGHT DEST*	Destination in night mode - can be a station or a station group.
CALL WAIT	Toggles YES or NO: if YES then the call will be camped-on at busy destination while NO gives busy indication.
OPTION	Accept: the selected destination party will be alerted. Reject: the call is cleared

* On iDCS systems these options are replaced by ring plans 1–6 so you can enter a destination for each plan.

Note: For each BRI access, two adjacent ports are assigned. You need only change the value for one of the two ports; the value for the other port will be changed automatically.

ACTION

DISPLAY

1. Open programming and select **421**
Display shows
2. Enter trunk number (e.g. 704)
OR
Press VOLUME keys to scroll through ports
and press RIGHT soft key to move cursor
3. Enter the location 1-8 (e.g. 4)
OR
Press VOLUME keys to select location and press
RIGHT soft key to move cursor
4. Enter digits to be translated (e.g. 4603881) and
press RIGHT soft key to move to the destination se-
lection
(Max. digits is 10)
5. Enter day destination* (e.g. 204)
OR
Press VOLUME keys to make selection and press
RIGHT soft key

(* NB: iDCS systems show ring plans 1 and 2. Enter
values for these plans and press RIGHT soft key to
select destinations for ring plans 3 and 4, then plans
5 and 6, as required. Then go to step 7.)
6. Enter night destination (e.g. 202)
OR
Press VOLUME keys to make selection and press
RIGHT soft key
7. Enter 1 for YES or 0 for NO for Call Waiting
OR
Press VOLUME keys to make selection and press
RIGHT soft key
8. Enter 1 for ACCEPT or 0 for REJECT (for Option)
OR
Press VOLUME keys to make selection and press
RIGHT soft key
9. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

ASSIGN TRUNK COS

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns a class of service (COS) to each trunk for each ring plan 1–6, or for day and night mode, depending on your system.

For DCS, Compact II and iDCS systems there are 30 (01–30) different classes of service. For 816 systems there are 10 (01–10). For 408/408i systems there are four (1–4). These are defined in [MMC 701, Assign COS Contents](#). According to the assigned COS, an outside caller to the system via a DISA line without a passcode may have restricted access to system features.

■ For all systems except iDCS

ACTION

1. Open programming and select **422**
Display shows first trunk
2. Dial trunk number (e.g. 705)
OR
Press VOLUME keys to scroll through trunks and press RIGHT soft key
OR
Press ANS/RLS to select all stations
3. Enter day class of service (e.g. 05)
OR
Press VOLUME keys to scroll through classes of service and press RIGHT soft key
4. Enter night class of service (e.g. 05)
OR
Press VOLUME keys to scroll through classes of service and press RIGHT soft key to return to step 2
5. Press Transfer/TRSF to save and exit
OR
Press SPEAKER to save and advance to next MMC

MMC: 433**TRUNK COST RATE**

DCS	✓	CI	✗	CII	✓	816	✗	408	✗	408i	✗	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel application only.)

The Trunk Cost Rate flags are entered for each trunk. Dial Plans are defined in [MMC 746](#). Rate Calculation Tables are defined in [MMC 747](#). Each trunk may be defined with up to eight cost rates. A cost rate is selected by entering a digit '1' beneath it in the display. If an entry is left with all zeros, no call costing will be calculated for that particular dial plan. Cost rate 8 is set for incoming calls only: select this cost rate for a trunk only if you want incoming call costing.

By default, all cost rates are selected. For most applications there is no need to change this default.

ACTION**DISPLAY**

1. Open programming and select **433**
Display shows trunk number and cost rates (CR)

[701]	:12345678
CR	:11111111

2. Dial trunk number (e.g., 705)
OR

MMC: 500 SYSTEM-WIDE COUNTERS

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets the values of the system counters. The counters are listed below with a brief description of each.

DIAL	COUNTER	DESCRIPTION
0	ALARM REMINDER	The number of times that an alarm reminder will ring a station before cancelling. RANGE = 1–99.
1	AUTO REDIAL	The number of times the system will redial an outside number after the auto redial feature has been activated. RANGE = 1–15.
2	DISA CALL	Sets the maximum number of internal calls that can be made after accessing a DISA line. RANGE = 1–99.
3	DISA LOCK	Number of attempts the system will allow to incorrectly access a DISA line before locking out the DISA line. RANGE = 1–99.
4	NEW CALL	Number of times the system will allow a user to signal New Call on a C.O. line during one call. RANGE = 1–99.
5	UCDS VISUAL ALARM*	Used to set the Visual Alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0–25.
6	UCDS AUDIO ALARM*	Used to set the Audio Alarm threshold. It is triggered when the number of calls waiting to be answered in the UCD group reaches this value. RANGE = 0–25
7	UCD CS LEVEL 1*	Provides call wait indication level 1 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0–25.
8	UCD CS LEVEL 2*	Provides call wait indication level 2 if number of calls waiting to be answered in UCD group reaches this value. RANGE = 0–25.

* Options 5–8 are not available on 408/408i systems.

ACTION

1. Open programming and select **500**
Display shows
2. Enter number from above list (e.g., 6)
OR
Press VOLUME keys to make selection
and press RIGHT soft key to move cursor
3. Enter in new value
If entry is valid, system will return to step 2

Timer Descriptions

AA INT DGT: Controls the grace period between dialling valid digits before transferring call to INVLDI DEST as set in [MMC 733](#) on a per-plan basis.

AA NO ACT: Time AA will wait for first digit for processing, after which call is transferred to the destination set in NO ACT DEST in [MMC 733](#).

AA TRANS: After this time, compare input digit with AA translation table ([MMC 732](#)) and transfer to destination.

ALARM: The time after which the System Alarm key will start ringing again when it has been silenced (iDCS500 'L' systems only).

ALERT TONE: Sets the duration of the attention tone preceding a call to a keyset in the Voice Announce or Auto Answer mode. This tone also precedes a forced Auto Answer call.

ALM REM INTERVAL: Controls the time between ring attempts at a station when alarm reminder is set.

ALM REM RING OFF: Controls the length of the ring cycle when alarm reminder is set at a station.

ATT RECALL: The length of time a transfer recall will ring at a station before recalling the operator.

AUTO REDIAL INT: Controls the time between attempts after RETRY dialling is set on a station.

AUTO REDIAL RLS: Controls the duration of a Ring No Answer condition on a retry number dialled before the auto redial is automatically cancelled.

BARGE-IN TONE INT: Controls the interval between the tones sent to the station being barged in on.

BOOTH TIME OUT: (Hotel Application) Controls the time for which a booth phone is enabled.

CALLBACK NO ANS: Controls the time before the callback is automatically cancelled when a callback detects Ring No Answer.

CAMP ON RECALL: Controls how long a camped-on call will stay at a destination before recalling to the transferring station.

CLIP DISPLAY: The amount of time that the Calling Line ID information remains on the keyset's display. While on a trunk conversation, users are allowed to review received CLIP by pressing *SCROLL* → *CLIP* soft key, but LCD will automatically go back to trunk conversation status on expiration of this timer.

CLIP MSG RECEIVE: The amount of time that the system will allow a valid message from the C.O.

C.O. CLEAR: The length of time a Direct Trunk Select key remains busy after cleardown.

CO CONFIRM: After this time, the outgoing call is disconnected or you hear the confirm tone.

C.O.- C.O. DISCONNECT: Monitors the duration of an unsupervised conference; when it expires, both trunks are disconnected.

CONFER TONE INT: Controls the intervals between the tones heard by the parties in a conference.

CONFIRM TONE: The tone heard when a feature is activated or deactivated.

CRD TONE INT: Controls the interval of the intermittent tone presented to station users whose calls are being recorded using the Auto Record feature (see Voice Mail documentation).

DIAL PASS: The wait time for preventing the misdialling of an outgoing call. After the last digit has been dialled, the voice path is connected.

DISA DISCONNECT: Controls the maximum duration of a DISA call.

DISA LOCK OUT: Controls the time period for which a DISA call is not allowed to be made after the DISA error counter has expired ([MMC 500](#)).

DISA NOANS DISC: Controls the time period after which a DISA call is disconnected if the call is not answered.

DISA PASS CHECK: Defines the time period before the system clears the incorrect passcode counter.

DISPLAY DELAY: Controls how long information is shown in the LCD. This timer also controls how long error tone is heard.

DOOR LOCK RELEASE: Controls how long the door lock relay is activated.

DOOR RING DETECT: Controls the period of time before a call is answered by the door phone.

DOOR RING OFF: Controls the duration of ringing at the door ring destination before automatically cancelling.

E-HOLD RECALL: Controls how long a call is held exclusively at a station before recalling. See [ATT Recall](#) timer.

EXT. FWD DELAY: Controls how long a station set to External Call Forward will ring before the call is placed on external call forwarding. (iDCS systems use the EFWD DELAY feature in [MMC 502](#).)

FIRST DIGIT: Controls how long the system will wait for dialling to begin before dropping the dial tone and returning the user to error tone.

HOK FLASH MAX: Monitors the duration of a hookswitch flash to ensure that the flash is valid and not a line noise or an accidental hookswitch bounce (LONGEST DURATION).

HOK FLASH MIN: Monitors the duration of a hookswitch flash to ensure that the flash is valid and not a line noise or an accidental hookswitch bounce (SHORTEST DURATION).

HOOK OFF: Controls the time before dial tone is sent to a single line station, or a ringing call is answered.

HOOK ON: Sets the minimum amount of time that the system will recognise as an SLT hang up. (Must be greater than HOK FLASH MAX.)

INQUIRY RELEASE: Monitors the duration of the action of the soft key to determine when to return the LCD back to a normal status. This timer affects only display phones.

INTER DIGIT: Controls the grace period between dialling valid digits before dropping the call and returning the user to error tone.

ISDN INT DGT: Controls the grace period between dialling valid digits and the end of the dialling string on an ISDN call.

KMMC LOCK OUT: Controls the grace period between programming actions while in a programming session (KMMC not PCMMC). The timer automatically returns the system to secure programming status.

LCR ADVANCE: Controls the period of time before selecting the next allowable route when a station is allowed to route advance.

LCR INTER DIGIT: Controls the grace period between dialling valid digits before dropping the call and returning the user to error tone.

MCL DELAY: Controls the time when the system should start transmitting Authorisation Code after sending MCL access code (Cable & Wireless 131 access).

MS LED ON: Controls the time for which a Manual Signalling key LED will flash when the key is pressed.

OFF HOOK RING: Controls the duration of time between ring bursts to a user who has a camped-on call.

OFF HOOK SELECT: Controls the grace period between lifting the handset and placing an internal/external call as programmed in [MMC 306](#). (iDCS systems use the OFFHK SEL feature in [MMC 502](#).)

OHVA ANSWER: Controls the duration of an OHVA call before automatic rejection. When a user receives OHVA with voice interrupt, this situation will last until this timer expires. If LCD phones receive OHVA, REJECT will appear at righthand side of bottom line while this timer is activated.

OVERLAP INT DGT: Controls the grace period between receiving address information in overlap receiving mode via BRI/PRI line. After expiration of this timer the system operator will be alerted.

PAGE TIME OUT: Controls the duration of a page announcement.

PAGE TONE: Controls the duration of tone burst heard over the page prior to the page announcement.

PARK RECALL: Controls the period of time a call is parked before recalling to the call park originator.

PC-MMC LOCK: Monitors PCMMC activity, drops the link if no action is created by PCMMC and returns the system to secure program status.

PERI UCD REPORT: Controls the interval between periodic UCD reports being output to the applicable port.

POWER DOWN: Sets the duration of disconnect signal for VM/AA ports.

RECALL DISCONNECT: The time an attendant recall rings before being disconnected. See [ATT Recall](#) timer.

RECALL WAIT: This is the time any recall (hold or transfer) continues to recall at your station before it recalls to the operator.

SMDR START/DP (DIAL PULSE (ROTARY)): This grace period timer starts SMDR recording for rotary dialling. This timer also controls the LCD duration timer on the keysets. The duration time displayed and the SMDR time duration will be the same.

SMDR START/DTMF: This grace period timer starts SMDR recording for touchtone dialling. This timer also controls the LCD duration timer on the keysets. The duration time displayed and the SMDR time duration will be the same.

ROUTE OPTIMISE: When a call is made via Q-SIG signalling, route optimisation is activated after this time.

SYS HOLD RECALL: Determines the time calls can be left on hold before recalling the holding station. Setting timer to 000 means no recalling will take place.

TRANSFER RECALL: Determines the time that transferred calls ring before recalling. See [Recall Wait](#) timer.

TSW CONN. DELAY: On external call forward or tandem working, the time before the forward destination is connected to the external call. If this timer is very short, the caller hears ringback tone, dial tone and ringback tone again.

UCDS AUDIO ALARM: Determines how long the longest waiting call can be held before the system gives an audio alarm to the UCD supervisor.

UCDS VISUAL ALARM: Determines how long the longest waiting call can be held before the system gives a visual alarm to the UCD supervisor.

VMS UCD MSG: Not used in UK/EU.

VOICE DIAL DELAY: Monitors the duration of the interaction between the main software and the Voice Dialler card. If there is no response from the card within this time, the system decides that voice dialling has failed (iDCS500 only).

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows certain station timer values to be changed on a per-station basis or for all stations. ***It is not advisable to change these values without assistance from Technical Support.***

- | | |
|--------------|--|
| 0 NO ANS FWD | Controls how long the station will ring before a Forward on No Answer takes place. (Range: 001- 255 sec.) |
| 1 DTMF DUR. | Governs the duration of DTMF digit which is transmitted to an external VM system port. It is useful for customising a voice mail system. (Range: 100 - 9900 msec.) |
| 2 F-DGT DELY | Allows a suitable delay for generating DTMF digits, for commencing in-band integration. (Range: 100 - 9900 msec) |
| 3 OFFHK SEL | Controls the grace period between lifting the handset and placing an internal/external call as programmed in MMC 306 . (Range: 0-250 sec) (iDCS systems only)* |
| 4 EFWD DELAY | Controls how long a station set to External Call Forward will ring before the call is forwarded. (Range: 1-250 sec) (iDCS systems only)* |

* Other systems can be programmed for these options in [MMC 501](#).

Note: It is reasonable for the system administrator to use trial and error to find a suitable value for options 1 and 2 above according to the characteristics of the selected Voice Mail system.

MMC: 507**ASSIGN RING PLAN TIME**

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Valid for iDCS systems only. For other systems, see [MMC 507, Assign Auto Night Time.](#))

Programs Ring Plan time settings. Ring Plans provide six separate ringing destinations (1–6) based on day of the week and time of day. The start time within a plan is the time the system will switch from the previous ringing destination to the one in this plan. The end time within a plan is the time the system will switch from this plan to the previous plan. If a ring plan has no time entry, the system defaults to ring plan 1. The ring plans correlate with all MMCs that program ring or termination destinations and station and trunk COS

It is helpful to also have a dedicated Ring Plan (RP) and Ring Time Override (RTO) key programmed on a keyset so the ring plan can be manually changed if needed. The RP key provides a temporary override until the next programmed ring plan start time. The RTO key provides a permanent override until the key is pressed again to disable the override. (Refer to either [MMC 722, Station Key Programming](#), or [MMC 723, System Key Programming](#).) A passcode is required to use these keys (see [MMC 202](#)).

When programming ring plans for any given day, it is important to remember that:

- they must be programmed in sequence (1, 2, 3, 4, 5, 6);
- a ring plan cannot be skipped (e.g. you cannot program 1, 2, 4, etc);
- a higher numbered plan cannot have a start time earlier than a lower numbered plan;
- ring plan 1 is the default plan.

Example

You might enter the following ring plans for Monday (in 24-hour clock format, e.g. 2200 is 10.00pm).

RING PLAN	START TIME	END TIME
(MON: 1)	ST: 0000	END: 23:59
(MON: 2)	ST: 0800	END: 2200
(MON: 3)	ST: 1000	END: 2000
(MON: 4)	ST: 1200	END: 1800
(MON: 5)	ST: 1300	END: 1600
(MON: 6)	ST: 1400	END: 1500

The system will stay in the last active ring plan from the previous day until the end time which is 23:59. Monday starts ring plan 1 at 00:00 (midnight). The system will stay in ring plan 1 until 08:00 and will stay in Ring Plan 2 until Ring Plan 3 starts (10.00). As each ring plan starts it will override the previous ring plan. If a ring plan ends and there are no subsequent ring plans, the system will default to the ring plan with an end time that extends past the expired ring plan time.

FEATURE KEYS

0	SUN	4	THU
1	MON	5	FRI
2	TUE	6	SAT
3	WED		

ACTION

1. Open programming and select **507**

ASSIGN AUTO NIGHT TIME

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✗	iDCS100	✗
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Not valid for iDCS systems. Refer instead to [MMC 507, Assign Ring Plan Time.](#))

Enters the system into night mode automatically by utilising time and day tables. A NIGHT key is not needed as the system will switch automatically. However, it is useful to have a dedicated key so the status can be manually changed if necessary. The start time is the time the system switches from day to night service; the end time is when it switches back from night to day service (e.g., start 1730 WED, end 0800 THUR).

All times are entered in 24-hour clock format (e.g. 1730 is 5.30pm).

FEATURE KEYS

0	SUN	4	THU
1	MON	5	FRI
2	TUE	6	SAT
3	WED		

ACTION

1. Open programming and select **507**
Display shows
2. Dial day number (0–6 e.g., 3)
OR
Press VOLUME keys to select day and press
RIGHT soft key to advance cursor
3. Dial start time for night (e.g. 1730)
If time entered is valid, cursor moves to end time
Enter end time (e.g. 0800)
If time entered is valid, system returns to step 2
4. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next

CALL COST

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets the Call Cost attributes generated by the system during a call. This information can be displayed on the keyphone LCD during a call or as an SMDR record.

Attributes are as follows:

0 UNIT COST PER MP

When the system is configured to receive MP on a C.O. outgoing call, this is used for generating total call cost by multiplying it by the number of pulses. Allows a maximum value of 5000. The value is displayed as ECENT (Euro cents) or PENCE depending on whether the 'USE EURO' option in [MMC 210](#) is set on or off.

1 CALL COST RATE (%)

This generates additional call cost calculated by multiplying this rate by the original call cost. Ranges from 100 to 250.

WARNING

- Changing a value when there is a call in progress may result in an inaccurate call cost.
- This MPD facility requires the Meter Pulse Detection version of the trunk card. It is not available on the standard product.

ACTION

- Open programming and select **508**
Display shows
- Dial 0 or 1 (e.g. 1)
OR
Press VOLUME keys for selection and press RIGHT soft key to move cursor
- Enter new value (e.g. 110 for 110 percent)
System returns to step 2
- Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 509**C.O. TONE CADENCE**

DCS	X	CI	✓	CII	X	816	X	408	X	408i	X	iDCS500	X	iDCS100	X
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Compact I systems only.)

Allows customising of the tone cadence provided from the analogue trunk on a system-wide basis. There are three types of tone available (see below). The control of the tone cadence may be changed from interrupt tone to continuous tone. Some systems may require default settings to comply with local operating companies. These tones are mainly used for performing Automatic Redial depending on call progress tones on request from internal users on a trunk call.

Once busy tone is detected from the Central Office, the call is automatically released and is queued for redial after expiration of the Auto Redial Interval timer (see [MMC 501](#)).

FEATURE KEYS

DIAL 0 INTERRUPT TONE
DIAL 1 CONTINUOUS TONE

MMC: 513**HOTEL TIMERS**

DCS	✓	CI	✗	CII	✓	816	✗	408	✗	408i	✗	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel Application only.)

Sets the normal check-out and clean times for guest rooms. Also allows iDCS system users to set a check-in end time (see descriptions, below). These are system-wide timers that affect all rooms and are set in 24-hour clock format (e.g. 1430 is 2.30PM).

CHECK OUT TIME

If a room is occupied after the checkout time, an additional day's room charge will be automatically added to the room bill. If a room is flagged as 'occupied' but 'on hold' then the additional day's room charge will not be added.

A late check-out can be performed by setting a room status to 'Hold'.

ROOM CLEAN TIME

This is the time each day that the system will flag all occupied rooms as 'Needs Cleaning'.

CHECK IN END TIME (iDCS systems only)

The time entered here tells the system which rooms to automatically add an additional day's charge at the Check Out Time. For example, if you set the Check In End time as 5AM, all rooms checked in *before* 5AM will be automatically charged an extra day at the Check Out Time (which might be, say, 11AM). Rooms checked in after 5AM will not be charged extra until the next day, if still occupied at the Check Out Time.

ACTION

1. Open programming and select **513**
Display shows
2. Select the timer using the VOLUME keys (e.g. ROOM CLEAN TIME) and press RIGHT soft key
3. Enter timer value (e.g. 11am)
4. Verify time (and re-enter if necessary)
Press RIGHT soft key to return to step 2
5. Press Transfer/TRSF to store and exit
OR

MMC: 601**ASSIGN STATION GROUP**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns stations to groups. This provides more flexibility, for example, if using Uniform Call Distribution (UCD), AA GROUP and VM/AA applications. A station, common bell, and ring page can be in more than one group, but must all be the same ring type. The maximum members per group for each system is as shown in the table.

	DCS	CI	CII	816	408/408i	iDCS500	iDCS100
Max members per group	48	30	30	16	8	48	32

Note: A device for announcement, if used, must provide a hookflash and return the call to the group.

The options to program depend on your system, but will be some or all of the following: GROUP TYPE, RING MODE, OVERFLOW, GROUP TRANSFER, NEXT PORT, MEMBER, NEXT HUNT AND GROUP BUSY.

GROUP TYPE

NORMAL GROUP	Station ring group
VMAA GROUP	Group VMAA ports designated in MMC 207 —can only have distribute or sequential ringing (see Ring Modes , below)
UCD GROUP	UCD group—has wrap-up capability. See UCD Groups , below.
AA GROUP	AA group—can only have distribute or sequential ringing (see below)
CADENCE or BI-VMS	Voice Mail group (VM card must be installed in system). Can only have distribute or sequential ringing (see Ring Modes , below)
MSG	Used to group a number of extensions to serve as a message desk or message group. When one of the stations in the group leaves a message for another station, the messaged station will return the message to the message group so any member can answer the call (iDCS500 systems only)
S0	Allows S0 ports to be members of a station group. Valid members are MSN numbers assigned to the S0 bus.

Other possible entries are:

3801–3820	COM. BELL	This device is a common bell relay on a Trunk A card.
3601–3640	RING PAGE	This device is ring over an external page zone output of a Trunk A card.

UCD GROUPS

Maximum number of UCD groups that can be programmed is:

DCS	10, created from last 10 station groups (520–529)
CI	10, created from any station group (501–529)
CII	5, created from the last 10 station groups (510–519)
816	3, created from the last 3 station groups (507–509)
iDCS500(L)	20, created from any group
iDCS500(M)	10, created from any group
iDCS100	10, created from any group

Options for UCD groups are set in [MMC 607](#).

RING MODES

- | | | |
|---|---------------|--|
| 0 | SEQUENTIAL | The first idle station listed in the group will ring. If the first is busy, the next idle station will ring. |
| 1 | DISTRIBUTE | The first call will ring the first station listed in the group. The next call will ring the next station listed in the group. |
| 2 | UNCONDITIONAL | All the stations listed in the group will ring. (Busy stations will receive off-hook ring, if set in MMC 300 .) <i>The maximum number of stations allowed to ring unconditionally for a group is: DCS=32, Compact II=10, 816=16, 408/408i=8, iDCS=32</i> |

Note: When a group is called, or a caller is transferred to a group, ringback is sent to the caller. Calls to a group do not follow the call forwarding instructions of any stations in the group.

FEATURE KEY

- | | | |
|---|----------------|--|
| 0 | TYPE | Group type |
| 1 | RING | Ring mode |
| 2 | OVERFLOW | Timer for overflow to 'Next Port' |
| 3 | GROUP TRANSFER | Timer for recall of calls transferred to group |
| 4 | NEXT PORT | Overflow port (station, group, common bell, ring over page) |
| 5 | MEMBER | Members of group (e.g. station numbers) |
| 6 | NEXT HUNT | Timer for ringing a station before hunting for next member ¹ |
| 7 | GROUP BUSY | If set ON, generates busy tone when all station group members of Sequential or Distribute ring groups are busy ² (refer to option SGR INC BUSY in MMC 210) |

Note:

1 = iDCS500 'L' systems only

2 = iDCS systems only

Purpose: Assigns trunks to a specific trunk group or to several trunk groups. This is very useful for programming of LCR when more than one trunk is to be in several dialling plans. There are two different modes of operation: (1) sequential and (2) distribute.

WARNING: One trunk can appear in more than one trunk group. If necessary, delete the trunk member from other groups to prevent accidental access.

	No of Trunk Groups	No of Group Members
DCS	11	01–80
CI	11	01–10
CII	11	01–40
816	4	01–10
408/408i	2	1–4
iDCS500 'L'	50	01–99
iDCS500 'M'	11	01–99
iDCS100	11	01–40

ACTION

1. Open programming and select **603**
Display shows (e.g. trunk group 9)
2. Enter valid trunk group (see above)(e.g. 81)
OR
Press VOLUME keys to make selection and press RIGHT soft key to advance cursor
3. Press RIGHT soft key to change mode
OR
Press VOLUME keys to change mode to member
4. Press RIGHT soft key to move cursor to number of member and enter valid member number (e.g. 04)
OR
Press VOLUME keys to make selection and press RIGHT soft key to move cursor
5. Enter valid trunk number (e.g., 729)
OR
Press VOLUME keys to make selection and press RIGHT soft key to return to step 2
6. Repeat steps 1–5 to remove trunk from group 9 (or group 0) if necessary

ASSIGN STATION TO PAGE ZONE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns a keyset to any or all of the internal paging zones. The total number of keysets that can receive a page is limited to 80 (DCS), 40 (Compact II), 12 (816), 4 (408/408i), 99 (iDCS500), or 40 (iDCS100).

■ For all systems except iDCS

If a keyset is flagged as "1" in a zone column, it will receive pages for that zone. If the keyset is flagged as "0," it will not receive pages for that zone. If "*" is set as "1", a keyset will receive pages for all zones.

408/408i systems are assigned internal page zones 1–2 only. Therefore, only these zones can be flagged as "1". Zones 3 and 4 are flagged as "0".

ACTION

1. Open programming and select **604**
Display shows
2. Enter number (01–80 or 01–40 or 01–12 or 1–4 depending on your system—see above) e.g., 04
OR
Press VOLUME keys to make selection and press RIGHT soft key to move cursor
3. Enter station number (e.g., 205)
OR
Press VOLUME keys to make selection and press RIGHT soft key to move cursor
4. Move cursor under page zone desired (e.g. 2) by pressing VOLUME keys and enter the digit 1 under the zone
Press RIGHT soft key to return to step 2 to continue with entries
5. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Determines which relays will close when one of the external page zones 5 to 8 is accessed. (816 and 408/408i systems have only one external page zone—see below.)

DCS	System must be equipped with a Trunk A card to allow external paging. Each Trunk A card is equipped with two external page relays. The page relays have default DNs of 360X (e.g. 3601)
CII	One external page zone is located on the base board. Three are located on the optional MISC card. The page relays have default DNs of 36x (e.g. 361)
816/408/408i	One external page zone (zone 5) is located on the base board. The page relay has a default DN of 361. The optional port is 362 (see MMC 219).
iDCS500	System must be equipped with a MISC card for external paging
iDCS100	One external page zone is located on the base board. Three are located on the optional MISC card. The page relays have default DNs of 36x (e.g. 361)

ACTION

ASSIGN SPEED BLOCK

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Adds or deletes speed dial blocks to/from the system or individual keysets. With the ability to delete a block or blocks of speed dial, these need not be wasted on such items as voice mail, SIMs and DPIMs, or on stations that do not require the ability to use speed dialling.

- The 'Free List' shows how many blocks are left to be assigned. One block has 10 entries.
- The number of blocks you can assign to system speed dials will depend on the maximum allowed per system.

DCS	Maximum 1500 entries: a maximum of 500 (50 blocks) can be assigned as system speed dials, and the rest (100 blocks) can be allocated as personal speed dials with a maximum of 5 blocks per station.
CI	Maximum 500 entries (50 blocks): all of these can be allocated to system speed dials or they can be used as personal numbers with a maximum of 5 blocks per station.
CII	Maximum 600 entries: a maximum of 500 (50 blocks) can be assigned as system speed dials, and the rest (10 blocks) can be allocated as personal numbers with a maximum of 5 blocks per station.
816	Maximum 500 entries: a maximum of 300 (30 blocks) for system speed dials while the rest (20 blocks) can be allocated as personal numbers with a maximum of 5 blocks per station.
408/408i	Maximum 300 entries: a maximum of 200 (20 blocks) for system speed dials while the rest (10 blocks) can be allocated as personal numbers with a maximum of 50 (5 blocks) per station.
iDCS500 'L'	Maximum 2500 entries: a maximum of 500 (50 blocks) can be assigned as system speed dials, and the rest (200 blocks) can be allocated as personal speed dials with a maximum of 5 blocks per station.
iDCS500 'M'	Maximum 1500 entries: a maximum of 500 (50 blocks) can be assigned as system speed dials, and the rest (100 blocks) can be allocated as personal speed dials with a maximum of 5 blocks per station.
iDCS100	Maximum 1500 entries: a maximum of 500 (50 blocks) can be assigned as system speed dials, and the rest (100 blocks) can be allocated as personal speed dials with a maximum of 5 blocks per station.

Selectable options are:

SYSTEM (set system speed dials)

EXT (set individual extension speed dials)

MMC: 607**UCD OPTIONS**

DCS	✓	CI	✓	CII	✓	816	✓	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets up UCD options for the UCD group assigned in [MMC 601](#). If no UCD group has been programmed in the system, you may be presented with a warning and not allowed to enter this MMC.

Note: Some options may not be available on your system.

OPTION

FIRST MSG	First message on AA card when no agents are available to answer calls.
SECOND MSG	Second message on AA card when no agents are available to answer calls.
EXIT CODE	Routes the queued call to the Final Destination assigned in this MMC (see below). This must be dialed while 1st or 2nd MSG is active.
RETRY COUNT	Second message will be cycled with MOH until this counter value is reached.
FINAL DESTINATION	If the call is not answered by the time RETRY COUNT time is reached, it will be routed over this destination. If you press the “A” key you can enter an AA Plan number.
RING NEXT	Specifies how long ringing at an agent will last. After this time, ringing stops, the agent is logged-out from the group and ringing starts at the next idle agent. If set as '0000', call will rotate between agents until answered.
UCD RECALL	Determines length of MOH between MSGs.
MOH SOURCE	Specifies MOH source to be presented to the caller.
WRAP-UP	No calls are presented to agents during this period.
AUTO LOGOUT	Turns ON or OFF the automatic logout of agents when the RING NEXT timer option is set. This setting is ignored if RING NEXT=0000.
ALLOUT→FINAL	Determines if calls forward to the Final Destination when all agents are logged out of the UCD group (ON=forward). If no Final Destination is assigned, the call will disconnect. (iDCS systems only)
AGENT PIN NO	If enabled, an agent PIN must be entered as part of the sequence to log into a group. The PIN must be registered in MMC 717 .
GBUSY NEXT	If set ON, an incoming call is sent immediately to the final destination if all members are busy.

MMC: 702**TOLL DENY TABLE**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets up the Toll Deny table (call barring).

	DCS	CII / 816	408/408i	iDCS500 'L'	iDCS500 'M'	iDCS100
No. of entries in table	500 (001–500)	200 (001–200)	100 (001–100)	500 (001–500)	250 (001–250)	250 (001–250)

Each entry, up to 12 digits, can be assigned to a class of service. With the use of wild cards (see [MMC 704, Assign Wild Character](#)), more flexibility can be built into toll restriction. Wild cards can be used repeatedly in the dial string, limited only to what is allowed or denied in MMC 704. There are six toll levels, B to G, that are programmable. Toll level A is set as unrestricted by default and toll level H is set as internal calls only by default.

WILD CARD KEYS

Wild card characters (X, Y, and Z) can be entered using the dedicated keys on your keyset as shown in the table.

Keyset Type	Key Number	Wild Card
DCS (Euro)	19 (24B) or 7 (12B) or 1 (6B)	X
	20 (24B) or 8 (12B) or 2 (6B)	Y
	21 (24B) or 9 (12B) or 3 (6B)	Z
iDCS	21 (28D and 18D) or 1 (8D)	X
	25 (28D and 18D) or 2 (8D)	Y
	22 (28D and 18D) or 5 (8D)	Z

Refer to [section 1.5 in Part 1](#) for a description of key numbers for your keyset.

ACTION

DISPLAY

1. Open programming and select **702**
Display shows
2. Dial entry number (e.g., 005)
OR
Press VOLUME keys to select index and press
RIGHT soft key to move cursor and enter toll
pattern via dial pad (e.g., 212)
OR
Enter wild card (e.g., 21X) and press RIGHT soft
key to move cursor to COS options
3. Press VOLUME keys to move cursor along line un-
til under toll class mark (e.g., E)
Enter a 1 for YES or 0 for NO and press RIGHT
soft key to return to step 1
OR
Press LEFT soft key to return to step 2
4. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next

MMC: 705 ASSIGN SYSTEM SPEED DIAL

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns system speed dialling numbers.

	DCS / CII	816	408/408i	iDCS
No. of speed dials	500	300	200	500
Speed dial numbers	500–999	500–799	500–699	500–999

Refer to [MMC 606, Assign Speed Block](#). Each speed dial number consists of a trunk or trunk group access code (e.g. 9) followed by a separator (–) and up to 24 digits to be dialled. These dialled digits can be 0–9, * and #. If the system recognises a valid trunk or trunk group access number, it will automatically insert the separator.

FEATURE KEYS

<u>"B"</u>	Insert a flash code "F"
<u>"C"</u>	Insert a pause code "P"
<u>"D"</u>	Insert a pulse/tone conversion code "C"
<u>"E"</u>	Mask/unmask following digits - shows as "[" or "]"
<u>"F"</u>	Toggle to MMC 706 and enter name for speed dial no.

(Refer to [section 1.5.2 in Part 1](#) for a description of feature keys.)

ACTION

DISPLAY

1. Open programming and select **705**
Display shows

SYSTEM SPEED DIAL BY NAME

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows a name, up to 11 characters, to be entered for each system speed dial number you set up in [MMC 705](#). This name enables the number to be located when using the directory dial feature. The directory dial feature allows the display keyset user to select a speed dial number by searching for the name.

Names are written using the keypad. Each key press moves the cursor and enters the selected character.* For example, if the name is "SAM SMITH", press the number "7" four times to get the letter "S". Now press the number "2" once to get the letter "A". Continue selecting characters from the keypad to complete your name. Press the programmable "[A](#)" key to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

* **Tip:** When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

The "[F](#)" key can be used to toggle to MMC 705 during programming.

ACTION

1. Open programming and select **706**
Display shows
2. Dial system speed entry number (e.g., 505)
OR
Press VOLUME keys to select entry number
and press RIGHT soft key to move cursor
3. Enter name using dial keypad and
press RIGHT soft key to return to step 2
OR
Press the "F" key to return to [MMC 705](#)
OR
Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next

TOLL PASS CODE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets codes and numbers valid for the following options:

0 PBX CODE

Identifies the access codes needed to work toll restriction (call barring) when the system is used with either a PBX or CENTREX-supplied dial tone (PBX ACCESS CODE option). A maximum of five entries is allowed (two for 408/408i systems). Toll restriction is applied only to trunks flagged as PBX in [MMC 401](#) when these codes are dialled.

1 SPECIAL CODE

Identifies the access codes needed to work toll restriction when operating special C.O.-provided functions (SPECIAL CODE option)—a maximum of 10 entries is allowed, each up to four digits.

iDCS systems also provide the following options:

2 TOLL OVERRIDE

This table of eight entries is used to identify numbers that will bypass all dialling restrictions including toll restriction, trunk access and forced authorisation and account codes. Each entry in the table can be up to 14 digits long.

3 OVRD USE TRK GRP

Designates the trunk group to use if a toll override number is dialled.

ACTION

MMC: 710**LCR DIGIT TABLE**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: The LCR DIGIT TABLE contains all numerical digits for the completion of outgoing call placement. This table works in conjunction with [MMC 711 \(LCR Time Table\)](#), [MMC 712 \(LCR Route Table\)](#), and [MMC 713 \(LCR Modify Digit Table\)](#).

Maximum number of entries is:

DCS & CII	816	408 & 408i	iDCS500 'L'	iDCS500 'M'	iDCS100
500	300	100	2000	1000	1000

Digit string length is 10 digits. This system automatically maintains entered digit strings in numerical order. The characters * and # are also accepted for use with feature codes.

ACTION

1. Open programming and select **710**
Display shows
2. Dial LCR entry (e.g., 005 or 0005)
OR
Press VOLUME keys to select entry and press RIGHT soft key to move cursor
3. Enter LCR digit string and press RIGHT soft key
OR
Press LEFT soft key to return to step 1
4. Enter digit length 00–31
Cursor will move to RT (route selection)
Enter RT 01–16 (01–32 for iDCS500 'L')
OR
Press LEFT soft key to return to length value
Valid entry will return you to step 1
5. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: This table gives flexibility to the system, through the LCR ROUTES, to allow calls placed at any given time of day to use the least cost trunk route that is available. When LCR ROUTE ADVANCE is allowed, it is possible for calls to be placed on more expensive trunks on any given time of day. There are four possible time entries per day; the start time of the next time period is the end time of the previous time period.

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: The LCR ROUTE TABLE is responsible for selecting a specific trunk group in the completion of an outgoing call. This table works in conjunction with [MMC 310 \(LCR Class Of Service\)](#), [MMC710 \(LCR Digit Table\)](#), [MMC711 \(LCR Time Table\)](#), and [MMC713 \(LCR Modify Digit Table\)](#). After the user dials a valid digit string, the system uses the LCR Route Table to select a specific predetermined trunk group. A maximum of 16 routes are available (except for iDCS500 'L' systems which have 32) beginning with route number 01. If more than one trunk group is available for call completion, the system uses the first designated trunk group and then starts to utilise succeeding trunk groups. If all trunk groups are busy in a selected route, call queue becomes active and allocates trunks as they become available.

ACTION**DISPLAY**

DDI NUMBER AND NAME TRANSLATION

DCS	✓	CI	✓	CII	✓	816	✓	408	X	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Assigns an incoming DDI call through ISDN to a specific station, if you have specified DDI service with your Network Carrier. DDI numbers can be matched to specific stations depending on day or night mode, or ring plan. You have the option, when the destination station is busy, of deciding if the call is to be camped on to the destination station or of clearing the call. A call waiting option allows a second DDI number to be received. iDCS500 'L' system administrators can also define a Music-On-Hold source for callers to specific DDI numbers.

There is an extra option to adjust the number of digits to be compared by skipping the programmed counts from the first digit point provided by the Network.

If there is no matching number in the DDI NUMBER TABLE, the system routes the call to the operator group (by default) or to the destination assigned in [MMC 406](#).

Maximum number of entries is:

DCS & CII	816	408 & 408i	iDCS500 'L'	iDCS500 'M'	iDCS100
200	50	20	999	400	500

Each entry consists of the following fields.

DIGITS (DGT)	Digits to be received (max. 12 digits). Wild card (*) is a valid entry
MOH SOURCE (iDCS500 'L' systems only)	Music-On-Hold source for DDI calls put on hold. There is a total of six possible music selections. In addition to "TONE", you may select an internal or external music source. Other sources can be: <ul style="list-style-type: none">• An Auto Attendant (AA) port to provide continuous play of a specific recording. The AA port selected must be the last AA port on the AA card (3958). If selected, the Music-on-Hold will be the message defined in MMC 736.• A Voice Mail card to select a recording as a music source. The recording must already be defined in MMC 756 and will show up here as the voice mail port associated with the recording.
DESTINATION	Destination can be a station, a station group, a trunk or trunk group. A destination can be selected for both day and night mode, or for each ring plan for iDCS systems. (The character "B" is acceptable to bypass.)
CALL WAIT (CW)	Allow a second DDI call to be received. Toggles YES or NO.
DELETE	Decides the number of digits not to be translated from the first digit received. This is useful when the received digits are prefixed with the same digit(s).
NAME	Gives a name to an individual entry (11 characters maximum). Names are written using the keypad in the same way as speed dial names (see MMC 706).

■ For all systems except iDCS

PROGRAMMED STATION MESSAGE

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Allows customised messages, up to 16 characters each, to be programmed. You can also edit any of the 10 pre-programmed (default) messages, if necessary, to suit your working environment.

These messages can be selected by a station user to inform other users of their current status (e.g. "In a Meeting"). The message displays on the user's keyset and also on any calling keyset which has a display.

Messages are written via the keypad. Each press of a key selects a character. Pressing a different key moves the cursor to the next position. For example, if the message is "In the Showroom," press key number "4" three times to get the letter "I." Then press key number "6" twice to get the letter "N" and press the VOLUME UP key to move the cursor right. Continue selecting characters from the keypad to complete your message. Press the programmable **"A" key** to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

Tip: When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

■ For all systems except iDCS

There are 20 messages allowed in total (01–20). Messages 01–10 are pre-programmed (see below) but can be changed by deleting and/or typing in new text. Messages 11–20 are blank by default ("EMPTY MESSAGE" may be displayed if one of these is selected, or the display is blank).

01. IN A MEETING

ACTION

DISPLAY

1. Open programming and select **715**
Display shows (message may be different)
2. Enter message number (e.g., 11)
OR
Press VOLUME arrow to make selection and
press RIGHT soft key to move cursor
3. If "EMPTY MESSAGE" or "Blank Message" is displayed, you can press HOLD to delete this text.
However, this is optional as any new message you type will simply overwrite the displayed text.

Enter new message (maximum 16 characters),
e.g. "In the Showroom"
4. Press RIGHT soft key to return to step 2
OR
Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Provides UK Least Cost Routing options.

Caution: Before using this MMC, run [MMC 812](#) to make sure the correct country option (e.g. "UK") has been selected.

- | | | |
|---|----------------|---|
| 0 | NETWORK CODE | Provides secondary network access code when the call is routed to the secondary network. 16 entries maximum (each 10 digits maximum in length). |
| 1 | PIN CODE | Assigns PIN code used when the call is routed to secondary network. |
| 2 | CCC OPTION | Selects Cost Centre Code (1: NONE or STATION NUMBER) |
| 3 | STATION PIN NO | Assigns individual users to selected PIN codes in the system. |

ACTION

- Open programming and select **716**
Display shows
- Dial item number (e.g., 2)
OR
Press VOLUME keys to make selection and press RIGHT soft key.
- Dial 0 or 1 for CCC option (e.g., 0)
OR
Press VOLUME keys to make selection and press RIGHT soft key
- Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

UCD AGENT ID

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Valid only for iDCS systems. For Compact I refer instead to [MMC 717, PIN Code](#), next.)

Enter PIN numbers for UCD agents.

iDCS500 'L' systems cater for 300 PINs (001–300); iDCS500 'M' and iDCS100 systems cater for 100 PINs (001–100)

ACTION

1. Open programming and select **717**
Display shows
2. Dial PIN number (e.g., 002)
OR
Press VOLUME keys to make selection and press RIGHT soft key.
3. Enter ID (four digits), e.g. 5555, and press RIGHT soft key
4. Enter the group number (e.g. 515)
OR
Press VOLUME keys to make selection and press RIGHT soft key to enter and return to step 2
5. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 720 COPY KEY PROGRAMMING

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: For duplicating key assignments from one keyset to another. This can be done on a per-station basis or on all stations, but not on a group of stations. A limitation is that the original and target keysets must have the same number of keys, e.g. both 24B keysets or both 12B keysets. A further condition is that a Euro keyset can only be copied to another Euro keyset, and an iDCS series keyset only to another iDCS series keyset.

ACTION

1. Open programming and select **720**
Display shows
2. Enter the station number to copy to (e.g., 205)
OR
Press VOLUME keys to make selection and
press RIGHT soft key to move cursor
3. Enter station number to copy from (e.g., 203)
(Cursor returns to step 2)
OR
Press VOLUME keys to make selection
4. Press RIGHT soft key to return to step 2
OR
Press Transfer/TRSF to store and exit
OR

SAVE STATION KEY PROGRAMMING

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Prevents the loss of programmable keys on keysets when testing or replacement is required. First the data is saved and then the station can be replaced with another station type or the keys can be reprogrammed to other features. Once testing or replacement is completed, the data can be restored to the individual station, providing the same keyset type is used.

Options are SAVE and RESTORE.

Note: This program is not to be confused with MMC 315 (Set Relocation). MMC 721 is for saving and restoring the same device type at a port.

ACTION

1. Open programming and select **721**
Display shows
2. Enter desired station number (e.g., 205)
OR
Press VOLUME keys to make selection and press RIGHT soft key
3. Press VOLUME keys to select function (e.g., SAVE)
4. Press RIGHT soft key to enter and return to step 2
OR
Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 722 STATION KEY PROGRAMMING

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Customises programmable keys on individual keysets and add-on modules (AOMs). All systems are provided with default functions for some keys to provide basic operation. For example, keys 1 and 2 are set as CALL keys by default because it is recommended that these keys should always function as CALL keys. A keyset will not operate correctly unless it has at least one CALL key programmed (but see note, below).

Other keys can be programmed as described here. You can use the VOLUME keys to scroll through the selectable functions when programming keys (see table at the end of this MMC).

Functions can also be entered via the dial keypad. For example, to assign the OHVA function, key number 6 can be pressed three times. If the BOSS function is required, press 2 twice for the first letter B, and then use the VOLUME keys to change the selection from BARGE to BOSS.

Note: 408/408i systems do not support AOMs and default key functions are different from other systems. For example, keys 1 and 2 are not set as CALL keys by default as these are not required.

ACTION

- Open programming and select **722**
Display shows

OR
For 408/408i systems, display shows
(The programming procedure is, however, the same)
- Enter station number (e.g., 205)
OR
Press VOLUME keys to make selection and press RIGHT soft key
- If you have a 408/408i system, or if selected station has no AOM pair, go to step 4

Enter 0 for MAST, 1 for AOM1 or 2 for AOM2.
OR
Press VOLUME keys to make selection and press RIGHT soft key
- Enter key number (e.g., 18)
OR
Press VOLUME keys to make selection and press RIGHT soft key

MMC

Default Data: For all systems (except 408/408i), programmable keys 1 and 2 are set as **CALL** keys. You are advised not to change these. Defaults for 408/408i systems are shown in the *Samsung DCS 408 & 408i Installation Manual*. Each programmable key can be reprogrammed with one of the functions listed below.

MMC: 723 SYSTEM KEY PROGRAMMING

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Refer to the description in [MMC 722, Station Key Programming](#), but note that MMC 723 allows you to program keys for **all** stations rather than individual stations.

Programming in MMC 723 is also done on the basis of keyset type (12-button, 24-button, etc) as shown in the following table.

KEYSET TYPE

Dial	DCS/CII/816	408/408i	iDCS
0	24-BTN	24-BTN	24-BTN
1	12-BTN	24-BTN EURO	12-BTN
2	6-BTN	12-BTN	–
3	–	6-BTN	6-BTN
4	48-BTN AOMS	28-BTN	–
5	–	18-BTN	48/64-BTN AOMS
6	28-BTN	8-BTN	20-BTN
7	18-BTN	24B SIMPLE	28-BTN
8	8-BTN	–	18-BTN
9	–	–	8-BTN

ACTION

1. Open programming and select **723**
Display shows

OR
For 408/408i systems, display shows
(The programming procedure is, however, the same)
2. Enter keyset type using table above (e.g.,1)
OR
Press VOLUME keys to make selection and press RIGHT soft key
3. Enter key number (e.g., 12)
OR
Press VOLUME keys to make selection and press RIGHT soft key
4. Press dial keypad to select function
OR
Press VOLUME keys to make selection and press RIGHT soft key to advance cursor to step 5 to enter extender, if required
OR
Press LEFT soft key to return to step 3

MMC: 724 DIAL NUMBERING PLAN

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: The system comes with a range of acceptable numbering plans and feature codes set as defaults. This MMC allows you to customise these dialling plans and feature codes. An error message is also provided in case an access/feature code is duplicated.

Note: An iDCS500 system can be pre-programmed with a default 3- or 4-digit numbering plan for stations, station groups and trunk numbers depending on the position of the DIP switches on the MCP card.

The following options can be selected. (N/A=not applicable.)

Option	Description	Dial			
		DCS/CII	816	408/408i	iDCS
STN DIAL NO.	Determines the station port dialling numbers	0	0	0	00
TRK DIAL NO.	Determines the trunk port dialling numbers	1	1	1	01
AA/VD DIAL NO. (or AA DIAL NO.)	Determines the auto attendant / voice dialler port dialling numbers	2	2	N/A	02
MISC DIAL NO.	Determines the miscellaneous port dialling numbers (e.g. MOH)	3	3	2	03
STNG DIAL NO.	Determines the station group dialling numbers	4	4	3	04
TRKG DIAL NO.	Determines the trunk group dialling numbers	5	5	4	05
FEAT DIAL NO.	Determines the feature codes	6	6	5	06
S0 STN DIAL NO.	Determines the S0 station dialling number	7	7	6*	07
DECT STN DIAL NO.	Determines the DECT station dialling numbers	8	N/A	N/A	08
NTWK LCR DIAL NO	Additional LCR access codes if two or more iDCS systems are networked together	N/A	N/A	N/A	09
VIRT EXT DIAL NO	Assigns or changes virtual station directory numbers	N/A	N/A	N/A	1

* 408i systems only

If changing feature codes using the FEAT DIAL NO option, you can use the VOLUME keys to scroll through selectable features. Features can also be entered via the dial keypad. For example, for OHVA, the number 6 would be pressed three times. If Block Code is required, press 2 twice for BARGE and then use the VOLUME UP key to select BLOCK. **The example shown below describes the use of the FEAT DIAL NO option.**

ACTION**DISPLAY**

1. Open programming and select **724**
Display shows (e.g. for Compact II)
2. Enter option number 0-8 (e.g. FEAT DIAL NO.)
OR
Press VOLUME keys to make selection and press RIGHT soft key.
3. Use dial keypad to select feature (e.g. DICT)
OR
Press VOLUME keys to make selection and press RIGHT soft key to advance cursor
4. Enter digits (e.g., 68)
5. Press LEFT soft key to enter change and continue to make changes
OR
Press RIGHT soft key to enter and return to step 2

If an error message appears indicating duplication of access code, enter 1 for YES (change) OR 0 for NO (no change)
6. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 725**SMDR OPTIONS**

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Selects the information to be printed on SMDR reports. Some or all of the following options may be selected, depending on your system. All have YES/NO options (YES=print) except where a new value or directory name is required.

Two options, HOTEL PAGE FEED and HOTEL START LINE, relate to the optional Hotel application and are provided for setting up the required printer output for invoices (port set to service type HM REPT in [MMC 804](#)).

PAGE HEADER	Determines whether a page header prints at the top of each page. This would normally be turned off if SMDR is being sent to a call accounting machine.
LINE PER PAGE	Selects the length of each page to determine when to print the SMDR header. The number of lines is in the range 01–99.
INCOMING CALL	Determines whether incoming calls print on SMDR.
OUTGOING CALL	Determines whether outgoing calls print on SMDR.
AUTHORISE CODE	Determines whether authorisation codes print on SMDR.
SMDR START TIME	Determines whether valid calls will include the minimum call time in total call duration (set in MMC 501).
IN/OUT GROUP	Allows a message, IN GROUP or OUT GROUP, to be printed in the Digits Dialed column each time a station enters or leaves a group.
DND CALL	Allows a message, DND ON or DND OFF, to be printed in the Digits Dialed column each time a station enters or leaves DND.
WAKE-UP CALL	Determines whether stations receiving an alarm reminder call print on SMDR.
DIRECTORY NAME	Allows the system administrator to enter a 16-character name which will appear on the SMDR header.
CALLER ID DATA	Can be selected to print CLIP data received from the C.O. on incoming ISDN calls. This option requires the use of a 132-column printer or an 80-column printer set for condensed print. (Not available on 408 systems.)
ABANDON CALL	If this option is set to YES, unanswered calls will print on SMDR. (Not available on 408 systems.)
NO. OF DIAL MASK	Number of dialled digits not to be printed (00–18)
INCOMING ANSWER	If set to YES, the duration of calls ringing before being answered prints on SMDR.
INTERCOM CALL	Determines whether internal calls print on SMDR.
KEY MMC IN/OUT	If set to YES, the SMDR will show programming being opened and closed (iDCS 500 'L' systems only).
HOTEL PAGE FEED	Determines where a page feed is inserted in Hotel invoice print. (Start, End or Both)
HOTEL START LINE	Determines number of blank lines to print on Hotel invoice print.

DID NUM/NAME

Determines whether DDI number and name print on SMDR. (Not available on 408 or iDCS systems.)

The DIRECTORY NAME that appears on the SMDR header is written using the keypad. Pressing a key selects a character and moves the cursor to the next position. For example, if the directory name is "SAM SMITH," press the number "7" four times to get the letter "S." Now press the number "2" once to get the letter "A." Continue selecting characters from the keypad to complete the name. Press the programmable **"A" key** to toggle between upper and lower case text. (Refer to section 1.5.2 in Part 1 for key descriptions.)

Tip: When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, and enter the new character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

Example 1: Switching options on (yes=print) or off (no=do not print)**ACTION****DISPLAY**

1. Open programming and select **725**
Display shows
2. Dial the option number (e.g. 00)
OR
Use the VOLUME keys to scroll through options and press RIGHT soft key
3. Use the VOLUME keys to select YES or NO
and press the RIGHT soft key to save the data and return to step 2
4. After all desired options have been selected and set, press Transfer/TRSF to exit
OR
Press SPEAKER to exit and advance to next MMC

PAGE HEADER PRINT : YES

PAGE HEADER PRINT : <u>Y</u> ES

PAGE HEADER PRINT : NO

Example 2: Changing no. of lines per page

ACTION

1. Open programming and select **725**
Display shows
2. Dial the option number 01
OR
Use the VOLUME keys to select and press
RIGHT soft key
3. Enter the number of lines per page in the range
01–99 (e.g., 50)
OR
Use the VOLUME keys to change the number of
lines and press the RIGHT soft key to save the
data and return to step 2
4. After all desired options have been selected and
set, press Transfer/TRSF to exit
OR
Press SPEAKER to exit and advance to next MMC

VM/AA OPTIONS

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets in-band signalling for voice mail or auto attendant parameters. There are eight main options for programming and several sub-options to customise the application. Simple YES/NO, numeric and alpha characters are required for setting VM/AA.

The following options may be selected for VM/AA operation:

0	EXT FOR DN1	DTMF information for the station that called the VM/AA port station which is forwarded to VM/AA port.
1	TRK FOR DN1	DTMF information for the trunk that called the VM/AA port.
2	EXT FOR DN2	DTMF information for the station that originated the call to a station which is forwarded to a VM/AA port.
3	TRK FOR DN2	DTMF information for the trunk that called a station forwarded to a VM/AA port.
4	SEPARATOR	In cases where DN2 is used, this specific digit is sent between the DN1 and the DN2 information. Both DN1 and DN2 must be set to YES for SEPARATOR to be sent.
5	DISCONNECT SIGNAL	This signal is sent when the calling station or C.O. line hangs up.
6	CALL TYPE ID	Under this VM/AA option are several customising applications:
0	<i>DIRECT CALL</i>	A call originating directly from another station in the system.
1	<i>ALL FWD CALL</i>	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD ALL set.
2	<i>BSY FWD CALL</i>	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD BUSY set.
3	<i>NOA FWD CALL</i>	This indicates that a call was forwarded to the VM/AA port from a station with CALL FORWARD NO ANSWER set.
4	<i>RECALL</i>	A call is recalling the VM/AA port after being transferred and not answered.
5	<i>DIR TRK CALL</i>	A C.O. call has gone directly to VM/AA (e.g., trunk 717 DIL to VM/AA).
6	<i>OVERFLOW</i>	A call has OVERFLOWED to the VM/AA port from a station group.
7	<i>DID CALL</i>	A DDI call has called the VM/AA port.
8	<i>MESSAGE CALL</i>	A message key or message reply feature code has been used to call the VM/AA port.
7	PROGRESS TONE ID	DTMF digits can be sent in place of normal system tones. Digits can be assigned to the following tones:

TONES

- 0. DIAL TONE
- 1. BUSY TONE
- 2. RINGBACK TONE
- 3. DND NO MORE
- 4. HDSET ANSWER
- 5. SPKER ANSWER

Note: For DCS and CII, the call progress tones will automatically be set to the default values if the SMDI VMS SET option in [MMC 210](#) is set ON.

FEATURE KEYS

- "A" Insert DTMF digit "A"
- "B" Insert DTMF digit "B"
- "C" Insert DTMF digit "C"

(Refer to [section 1.5.2 in Part 1](#) for key descriptions.)

MMC: 728 CLIP TRANSLATION TABLE

DCS	✓	CI	✓	CII	✓	816	✓	408	X	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Associates a CLIP number received from the central office with a name programmed in this translation table. If there is no match between a received number and a name in this table, "no CLIP name" is displayed.

DCS	Translation table consists of 250 entries, each comprising a telephone number up to 11-digits and a name up to 16-digits
CII and 816	Translation table consists of 200 entries, each comprising a telephone number up to 16-digits and a name up to 16-digits
408i	Translation table consists of 100 entries, each comprising a telephone number up to 14-digits and a name up to 16-digits
iDCS500	Translation table consists of 1500 entries ('L' systems) or 400 entries ('M' systems), each comprising a telephone number up to 14 digits and a name up to 16-digits
iDCS100	Translation table consists of 350 entries, each comprising a telephone number up to 14 digits and a name up to 16-digits

Names are written using the keypad. Each key press moves the cursor and enters the selected character.* For example, if the name is "SAM SMITH", press the number "7" four times to get the letter "S". Now press the number "2" once to get the letter "A" Continue selecting characters from the keypad to complete your name. Press the programmable ["A" key](#) to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

* **Tip:** When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

AA TRANSLATION TABLE

DCS	✓	CI	X	CII	✓	816	✓	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: AA translation tables are responsible for routing calls based on digits dialled. There are 12 Translation tables. Each table can be assigned to one or more AA plans in [MMC 733, AA Plan Table](#).

Number of Table Entries

iDCS systems Translation tables 01–12 have up to 100 entries each.

Other systems Translation Tables 01 and 02 have up to 100 entries each (or 50 each on 816 systems). Tables 03–12 have up to 25 entries.

Each entry comprises two fields: the digits dialled and the destination. Destinations can be a station number, station group, Change Greeting Message Code, or an AA plan table.

In the digits dialled field, “*” can be used to represent any digit.

FEATURE KEYS

The keys “A–D” can be pressed in the destination field. (Refer to [section 1.5.2](#) in Part 1 for key descriptions.)

- If you press the “A” key, you can enter an AA plan table 01–12. (The display shows “P”.)
- If you press the “B” key, the destination will be the same as the digits dialled by the caller.
- If you press the “C” key, you can enter CHANGE GREETING MESSAGE CODE.
- If you press the “D” key, this takes the call to voice mail

For iDCS Systems and DCS/Compact II Systems Operating Version 7.x Software:

Entries in the translation table will also provide the following features which are useful if a mailbox owner does not have a telephone in the system, but does have a voice mailbox.

- A caller dialling # + nnn can leave a message in the mailbox specified by nnn.
- A caller dialling * + nnn will log into the mailbox specified by nnn.

Changing Ring Plans and Greeting Message

- When the system changes ring plans (or day/night mode), the AA greetings will also change as programmed in [MMC 733](#).
- If the AA change greeting message code is entered, a caller can select the alternative greeting message or change the ring plan (or day/night mode):

- **iDCS:** To implement ring plan changes and/or the alternative greeting, the caller must enter the number (passcode) that implements the special program. The passcode must be followed by two digits: the first digit (1-6) selects the desired ring plan to select (or can be 0 for no change); the second digit can be 1 for the alternative greeting or 0 for no alternative.
- **DCS/CII:** To change day/night mode and/or the alternative greeting, the caller must enter the number (passcode) that implements the special program. The passcode must be followed by digit 1-3: 1 selects day, 2 selects night and 3 selects the alternative greeting.
- If an **RP** (Ring Plan) key is programmed in an iDCS system, it will flash to show that the ring plan has the alternative message set. (The normal status of this light in a ring plan is on steady.) If an **RTO** (Ring Time Override) key is available this will also flash
- If the greeting message is not changed but the ring plan is changed, the system will remain in the selected ring plan until the next scheduled ring plan change. If the greeting message is changed the system will remain in the existing ring plan or the selected ring plan until the alternative greeting is manually changed back

Example (iDCS): Caller dials into the system and is answered by the AA card. Caller enters the passcode then dials 3, to select ring plan 3, followed by 1 to turn on the alternative greeting. The system now rings according to ring plan 3. Ring plan 3 is directed to the AA card and the caller is now answered by the alternate greeting.

ACTION

DISPLAY

1. Open programming and select **732**
Display shows
2. Dial TABLE number (01-12, e.g. 02)
OR
Press VOLUME keys to select and press RIGHT soft key
3. Dial entry number (see [Number of Table Entries](#), above), e.g. 002
OR
Press VOLUME keys to select and press RIGHT soft key
4. Enter Dial DIGIT (e.g. 2**)
Press RIGHT soft key
5. Dial Destination (e.g. B)
OR
Press VOLUME keys to select and press RIGHT soft key
6. Press Transfer/TRSF to store and exit
OR

MMC: 737**DECT SYSTEM CODE**

DCS	✓	CI	✓	CII	✓	816	✗	408	✗	408i	✗	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Identifies your DECT system and the handsets you register with your system.

The DECT System Code for your system is made up of two fields: the *System ID* which is three hexadecimal digits in the range 001 to 999; and the *Auth Code* (short for Authentication Code) which is four hexadecimal digits in the range 0000 to 9999. The default values are 000 and FFFF respectively.

Important:

You must use this MMC to change the default values for the values you have been provided with by your supplier. If you do not change the defaults you will not be able to register handsets.

Once you have entered your new System ID and Auth Code using this MMC you can then begin registering your handsets with the Auth Code. The system checks the Auth Code entered for each handset against the DECT Auth Code. If it is the same, the registration procedure continues; otherwise, the DCS rejects the registration procedure.

Caution: Only the system administrator and/or installer should be allowed access to change the DECT System Code and register handsets.

ACTION**DISPLAY**

1. Open programming and select **737**
Display shows
2. Press RIGHT soft key to move cursor and enter
AUTH CODE (e.g. 1234)
3. Press RIGHT soft key and press VOLUME keys to

MMC: 746

COSTING DIAL PLAN

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: The Costing Dial Plan is used to analyse the leading dialled digits of a number and determine what Dial Plan it is to follow. The entries are as follows.

COST DP: Up to 500 entries can be made.

DIGITS: Each entry can be up to 10 digits. These are the entries that will be searched to find a match with the digits dialled by the station making the call. This is a leading digits table and the system will look for the exact leading digits in the table that match the number dialled. For example, if a user dials 1305 and the Costing Dial Plan contains 1, 1308 and 1312, the dialled digits will be matched to 1 because 1308 and 1312 do not form a complete match. When this table is created or when any new entries are added, the system automatically places all entries in numerical order.

No number conflicts (e.g., 142 and 1429) are allowed. Wild cards (X, Y, Z) can be used to represent any digit and are defined in [MMC 704](#). When all entries are used, [LAST ENTRY] is displayed.

CALL RATE: This is one of eight (1–8) cost rates used by [MMC 433 \(Trunk Cost Rate\)](#), to determine the correct billing according to [MMC 747 \(Rate Calculation Table\)](#).

Examples

When a station user dials a number, the system will search the Costing Dial Plan to find a match. If 13056 is dialled and this MMC contains entries 1, 13, 1305 and 1401, then 1305 is the closest match and this entry will be selected. If 1305 is dialled and this MMC contains entries 1, 13, 13056 and 1401, no action will be taken until the station user dials another digit. If the next digit is 6, the 13056 entry will be selected, but if the next digit is anything other than 6, the 13 entry is selected as the closest match.

Whenever a new entry is added, the system will sort all entries in numerical order because this is the logical order in which the system analyses digits. Wild cards are checked after exact digits. If 1813 and 18XX are entered, the system will check 1813 first. If no match is found, it will check 18XX.

ACTION	DISPLAY
1. Open programming and select 746	COST DP (001) DIGIT:
2. Dial Call Cost entry (e.g., 005) OR Press VOLUME keys to select entry and press RIGHT soft key to move cursor	COST DP (005) DIGIT:_
3. Enter digit string via the dial keypad (e.g. 1305) and press RIGHT soft key	COST DP (005) DIGIT:130 <u>5</u>
4. Enter Dial Plan 1–8 e.g. 7 and press LEFT soft key to return to step 3 or RIGHT soft key to return to step 2	COST DP (005) CALL RATE: <u>7</u>
5. Press Transfer/TRSF to store and exit OR Press SPEAKER to store and advance to next MMC

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Defines the billing charges for each phone call cost rate. There are eight call cost rates. Each rate has the following data fields.

First Interval Duration: The amount of time at the beginning of each call to which a fixed cost is applied. The range is 0 to 999 seconds; for example, 180 seconds (three minutes).

First Interval Cost: The cost for the first interval duration. The range is 0–999 pence (or cents if the 'Use Euro' option is set on in [MMC 210](#)). For example, 100 is £1.00 or 1 Euro.

Second Interval Duration: The duration of each billing increment after the first interval has expired. The range is 0–999 seconds; for example, 006 seconds (six seconds).

Second Interval Cost: The cost for each billing increment. The range is 0–999 pence (or cents if the 'Use Euro' option is set on in [MMC 210](#)). For example, 025 is £0.25 or 25 Cents

Surcharge: This is a one-time charge applied to a call over and above the time charges. The range is 0–999 pence (or Cents).

ACTION

1. Open programming and select **747**

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Voice Mail—Cadence, SVMi-4, SVMi-8, SVM-400.)

Determines whether mailboxes are set up according to the data set in [MMC 751, Assign Mailbox](#), when the Voice Mail card is restarted. There are two options available in this MMC: Download and Card Restart.

DOWNLOAD

When the card starts, part of the power-up procedure will download data from the system to determine time, date, what mailboxes to create, and the system numbering plan. This must be done at least once, but when done this download feature can be turned off to save boot-up time.

CARD RESTART

If this option is set to YES, the card will immediately restart according to the Download option specified above.

ACTION

DISPLAY

1. Open programming and select **750**

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel Application only.)

Assigns a code to all Hotel items along with a name (up to 10-characters) for each item. There is a maximum of 100 entries (00–99) in the table. Items 00 and 01 are reserved as the codes for deposits, and items 89–99 reserved for other PMS stream items (see *Pre-defined Codes*, below). All other codes (02–88) can be assigned here. All item codes, with the exception of codes 93 to 99, will appear on the guest's bill at checkout and will serve to identify what each charge on the bill is for. The room bill, when printed, will also show telephone calls with an item designation of TEL and the name field will show the number dialled. In addition to the name, up to eight of the tax codes or rates defined in [MMC 761](#) can be applied to each item.

Refer to your Hotel documentation for more details.

PREDEFINED CODES

Item	Description	Use
00	RM Deposit	Used for room pre-pay deposits
01	PH Deposit	Used for phone pre-pay deposits
89	W/UP SET	A wake up call was set
90	W/UP ANS	A wake up call was answered
91	W/UP N/ANS	A wake up call was not answered
92	W/UP CANCL	A wake up call was cancelled
93	Check In	A guest has checked into a room
94	Check out	A guest has checked out of a room
95	Available	Room flagged as Available
96	Occupied	Room flagged as Occupied
97	Clean Room	Room flagged as Needs Cleaning
98	Fix Room	Room flagged as Needs Maintenance
99	Hold	Room flagged as on Hold

OTHER CODES

Codes 02–88 can be defined as, for example, Double (room), Single (room), Room Service, etc.

ITEM NAMES

Names for items are written using the keypad. Each key press moves the cursor and enters the selected character.* For example, if the item name is "ROOM COST", press the number "7" three times to get the letter "R". Now press the number "6" three times to get the letter "O". Continue selecting characters from the keypad to complete your name. Press the programmable ["A" key](#) to toggle between upper and lower case text. (Refer to [section 1.5.2](#) in Part 1 for key descriptions).

* Tip: When the character you want is on the same key as the previous character you typed in, press the VOLUME UP key to move the cursor to the right, then select the character.

The # key can be used for the following special characters (in sequence of key presses):

#	space	&	!	:	?	.	,	%	\$	-	<	>	/	=
[]	@	^	()	_	+	{	}		;	"	→	`

ACTION

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (Hotel Application only.)

Sets up the eight tax rates used in [MMC 760](#). Each tax rate can be defined as described below. In addition, a name (up to 10-characters) may be used to define the purpose of the tax. The options are:

TAX RATE: The number assigned to this tax rate. The tax rates are numbered 1 to 8 to match the rate field in MMC 760, counting from left to right.

TYPE: The type of tax. Defines if the value is added as a percentage (%) of the cost of an item, is included as a percentage of the cost of the item (I) or is added as a fixed currency value to an item (C). For example, % = service charge, I = VAT, C = admin.

VALUE: The actual tax rate that will be applied to the item cost.

NAME: The name (up to 10-characters) that will be displayed on the room bill alongside the tax (e.g. VAT, Service Charge).

Names are entered using the keypad. (Refer to the description "Item Names" in [MMC 760](#).)

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets parameters for the system I/O ports to work with one of the following:

- a personal computer (PC)
- Station Message Detail Recording (SMDR)
- UCD statistics report/periodic UCD information (except 408/408i)
- Computer-Telephony—TSAPI—Interface (CTI)

System	No. of I/O Ports
DCS, CII, 816	Two ports (Ports 1 and 2)
408/408i	One port (Port 1)
iDCS500	Up to five ports available on an iDCS500 with a LAN module. The fifth port is used for internal modem control. If no LAN module is installed, three ports are available and the third port is used for internal modem control.
iDCS100	Up to three ports available on an iDCS100. Two are supplied on the MISC 1 or MISC 2 card and one on a MEM4 card.

Use the tables below to customise I/O ports.

PARAMETER OPTIONS

Dial 0	Service	Type of Service
Dial 1	Baud Rate	Speed
Dial 2	Char Length	Character Length
Dial 3	Parity	Parity Bit
Dial 4	Retry Count	Number of Retries
Dial 5	Stop Bit	Stop Bit
Dial 6	Wait Time	Message Wait Time
Dial 7	DSR Check	DSR Check on/off (all systems <u>except</u> DCS)
	or	
	SIM Pair	No. of the station connected to the Serial Interface Module (SIM) (DCS systems only)

SERVICE TYPE

Each port can be set to one of the following service types. Note that the services available depend on the type of system being programmed. No two ports can be programmed with the same service type.

Type	Description
PC-MMC	PC application
SMDR	SMDR report (call logging)
UCD REPT	UCD report on request by the supervisor, or daily
UCD/SMDR	Both SMDR and UCD report will be generated
CTI	Dedicated Switch Link Interface
CTI/SMDR	CTI and SMDR
CTI/UCD	CTI and UCD
CTI/S/U	CTI, SMDR and UCD
VM TRACE	Voice Mail monitoring

TRAFFIC	Traffic report
TRF/SMDR	Traffic report and SMDR
ALARM	Alarm report
ALM/TRAF	Alarm report and Traffic report
PERI UCD	Periodic UCD report
HM REPT	Hotel report
PMS	PMS report
PMS SMDR	PMS report and SMDR
BD-PMS	Bi-directional PMS
UCD VIEW	UCD view
UV/SMDR	UCD view and SMDR
UV/CTI	UCD view and CTI
REMO M/A	Remote Maintenance & Administration*
NOT USE	Not used

* NOT remote PCMMC

SPEED (BPS)

Speed	Dial Key

TX LEVEL AND GAIN

DCS	✓	CI	✓	CII	✓	816	✓	408	✓	408i	✓	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: Sets the base level of TX volume and the TSW gain control for time-switch connect types.

There are eight (8) volume levels which are controlled by the VOLUME keys on the key-set. However, there are 11 possible levels in a DCS or Compact II system, nine in an 816 system, four in a 408/408i system and 10 in an iDCS system. With this MMC, you can select the desired levels.

Options are:

TX LEVEL CONTROL
TSW GAIN CONTROL

iDCS500 systems also provide a MISC TSW gain control option for Background Music and Music-On-Hold.

Caution—You should only change the default values under the supervision of Technical Support.

ACTION

DISPLAY

1. Open programming and select **805**
Display shows
2. Press VOLUME keys to select TX LEVEL CONTROL or TSW GAIN CONTROL (or MISC TSW GAIN)
OR
Press RIGHT soft key to select

If you selected TX, goto step 3
If you selected TSW, goto step 4
If you selected MISC TSW, goto step 6

TX LEVEL CONTROL
LEVEL 0 → 1

TX LEVEL CONTROL
LEVEL 0 → 1

3. Press RIGHT soft key to go to the volume level
OR
Press VOLUME keys to go to next volume level

TX LEVEL CONTROL
LEVEL 1 → 2

Enter desired volume level
OR
Press VOLUME keys to scroll data (00-10)
(Go to step 7 if finished)

TX LEVEL CONTROL
LEVEL 1 → 3

4. Press RIGHT soft key to go to the TSW GAIN CONTROL type
OR
Press VOLUME keys to go to next TSW type
5. Press VOLUME keys to select TSW gain data
Press RIGHT soft key to go back to step 4 or go to step 7 if finished
6. Press RIGHT soft key to go to the volume level
Enter the value 0–7 (system returns to step 2)
OR
Press VOLUME keys to select and press RIGHT soft key to return to step 2
7. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

MMC: 815 CUSTOMER DATABASE COPY

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems only.)

Enables the onboard customer database (SRAM) to be copied to the SMDB (iDCS500 SmartMedia card database) or the FLDB (iDCS100 Flash Memory database), and also allows a saved SMDB or FLDB database to be copied to the SRAM.

A daily save can be programmed to automatically save the SRAM to the SMDB or FLDB. This ensures that an up to date database is always available in case of a system failure. A daily save time of 00:00 means this option is disabled. It is recommended that you CLEAR the SMDB or FLDB before the SRAM is copied to it. When the SRAM is copied to the SMDB or FLDB there is no interruption in service. If the SMDB or FLDB is copied to the SRAM the system will reset to accept the new data.

Note:

- 1 iDCS100 systems require a MEM4 card which contains the SRAM.
- 2 The SRAM is on the MCP card in iDCS500 systems.

If the SmartMedia card or Flash Memory is in use when you run this program, a message "SMART IS BUSY" or "FLASH IS BUSY" is displayed.

ACTION

DISPLAY

To copy SRAM to SMDB or FLDB

MMC: 824 NETWORK DIAL TRANSLATION

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems only.)

Assigns the digit translation table used for Q-SIG networking. Generally, to call an extension on another node of a network, the station user must dial the node ID and extension number. This MMC provides a simple digit translation so that the user need only dial the extension number to call the station on the other node. The access digit needs to be programmed in [MMC 724](#) (NTWK LCR DIAL NO. option) first.

The number of entries for the network dial translation table is:

iDCS500 'L' = 96 iDCS500 'M' = 16 iDCS100 = 20

Note: iDCS100 systems require a MEM4 card.

In the following example, extensions in node 200 need to call 3-digit extensions in node 300.

ACTION**DISPLAY**

1. Open programming and select **824**
Display shows access digit programmed in MMC 724 (e.g. 3)
2. Dial entry number e.g. 01
OR
Press VOLUME keys to select and press RIGHT soft key
3. Dial digit string for access to node (e.g. 300) followed by the access digit ('3' in this example)

(Press RIGHT soft key to move cursor to SZ field, if necessary)
4. Enter digit size: the number of digits the user will dial ('3' in this example, for 3-digit extension)
OR
Press VOLUME keys to select and press RIGHT soft key
5. Enter maximum digits to be dialled by system ('6' in this example—digit string for access, plus number of extension digits=300xxx)
OR
Press VOLUME keys to select and press RIGHT soft key

01: 3 →
SZ:0 MAX:00 MB:N

01: 3 → _

MMC: 831**VoIP PARAMETERS**

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with ITM3 card installed.)

Applies the Internet Protocol (IP) address to the ITM3 card. This MMC also assigns the number of channels that can be used for IP faxes. The CLIP tables allow the calling station number to be received at another ITM3 location. Options are:

IP ADDRESS	Specifies the IP address for the ITM3 card. When changing the address, three digits must be entered for each field.
SUBNET MASK	Specifies the IP subnet mask. When changing the address, three digits must be entered for each field.
GATEWAY	Specifies the LAN gateway address when leaving the local network. When changing the address three digits must be entered for each field.
STS PERIOD	Status Send Period designates the timed message cycle to check the remote IP status (Range: 00–60 sec.)
MAX FAX CH	Maximum facsimile channels. Specifies the maximum number of ITM3 channels that will accept IP T.38 protocol IP facsimiles (max=8, default=0).
CLIP TABLE	Calling Line Identification Presentation table. This provides the calling station number when calling from one ITM3 location to another. (Range=1–4 or NONE.) If set to NONE, the trunk number set in MMC 405 will be sent. Otherwise, the number set in MMC 323 will be sent.
VOIP MODE	Three options are available: FOLLOW DID TRANS (MMC 714) FOLLOW INCOM DGT (follow incoming digit) or FOLLOW TRK RING (MMC 406).
VERSION	Displays the ITM3 card version number

ACTION**DISPLAY**

1. Open programming and select **831**
Display shows the first trunk on the ITM3 card.
2. Press RIGHT soft key to move cursor to IP address line
3. Enter new data as required
Cursor return to top line
4. Press VOLUME keys to select next option (Subnet Mask) and press RIGHT soft key
5. Enter new data as required
Cursor return to top line

MMC: 832**VoIP CODE**

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (ITM3 card must be installed.)

Sets the ITM3 internal numbering plan for dialling and conversion.

ACCESS CODE	Once the ITM3 is accessed, the access code directs a call based on the routing tables. An access code table references an access code. Codes are a maximum of 8 digits. There are 63 access code entries (00–62)
CODE LENGTH	This field requests the number of digits (0–8) that are expected to be received to make up the access code
DEL LENGTH	The number of digits (0–8) to delete after receiving the access code. If no digits are deleted the access code will be sent as part of the call to the destination to continue routing at the destination
INSERT CODE	The code to insert for routing at the destination. This can be used when different numbering plans exist or if a 'dial 9' access is needed to be inserted in the dialled digits (max 8 digits)
IP TABLE 1	The first table referenced for routing the access code to an IP address. The system has 31 IP tables (00–30) with 32 entries (00–31) in each table.
IP TABLE 2	The second table (00–30) referenced as a look up for an IP address to route the call based on the access code.
IP START	This entry indicates where in a table to start looking for an IP code to associate with the access code. This can be used to manage where to start looking for an IP address in high traffic ITM3 applications. For example: if IP address routing to the desired destination is known to be in the last 7 entries of a table, the IP START location would be 25. IP address searching would start at entry 25.
GK USE	Connection through Gatekeeper (YES/NO).

ACTION

1. Open programming and select **832**
Display shows
2. Dial an entry number (e.g. 01)
OR
Press VOLUME keys to select and press RIGHT soft key
3. Press RIGHT soft key and enter access code (max 8 digits) and press RIGHT soft key
4. Press VOLUME keys to select next option (Code Length) and press RIGHT soft key
5. Enter Code Length (e.g. 8) and press RIGHT soft key

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with ITM3 card installed.)

This MMC provides the IP addresses in tables pointed to by the access code entry. There are 31 tables with up to 32 entries each. The destination IP address is required to route dialled digits based on the access code and digits dialled. The IP entry field is divided into four sections allowing modification of separate IP address fields.

Note: All IP address entries must 3-digit entries. For example: IP address 105.52.10.201 must be entered as 105.052.010.201.

ACTION

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with ITM3 card installed.)

Provides various VoIP support options. *The options set in this MMC are system wide.*

H.323 FAST START SETUP	Enables or disables the H.323 Fast Start call method.
GATEWAY CALL ID	A numeric entry that identifies the system via the ITM3 connection. Maximum entry is four digits.
BILLING TYPE	Standard.
CALLER ID TYPE	This option controls the calling party identification type. There are three possible selections: ANI which shows the calling station number when the call is an ITM3 to ITM3 call; IP which shows the calling ITM3 IP address; and GW (Gateway) ID which is a 4-digit pre-programmed ID.
INCOMING CHANNEL	Selects whether the incoming channel is Sequential or Distributed.
DTMF GENERATION	Allows four different transport types of DTMF: In-band, Q931, H.245 Signal, and H.245 Numeric.
FAX SIGNAL TYPE	Selects the facsimile standard to use when transporting faxes via the ITM3. Selections are T.38 or the proprietary Samsung formats. Default is T.38.
SWITCH TO H.245	Enables switching to the H.245 protocol at the time of Fast Start
DEFAULT DIL NO.	Allows programming of the default DIL number when digits are not included on an incoming call.
SIGNALLING PORT	Indicates the port number for H.323 signalling and sets a range of numbers allowed by firewall equipment. The IP path or port used is 10000.
STATUS PORT	Port number for the exchange of status information between ITM3 cards. The IP path or port used is 20000.
WCS PORT	Proprietary Samsung Web Call Service. The IP path or port used is 20010.
SIGK ACCESS PORT	Samsung Internet Gatekeeper. The IP path or port used is 20020.
MAKE DEFAULT DB	This option permits defaulting of the ITM3 card program parameters. <i>CAUTION: This option is system wide and defaults <u>all</u> ITM3 cards in the system! Card must be restarted to take affect.</i>
EARLY H245 MODE	Set to YES if H.323 FAST START SETUP is enabled.
RING BACK TONE	Generates Ring Back tone. 0 DISABLE: Do not use Ring Back tone 1 SETUP: Use Ring Back tone when sending set-up 2 ALERT: Use Ring Back tone when receiving Alert
Q931 NO ANS TIME	Timer used to disconnect call on no answer.
ISP TYPE	Used when connecting to ITSP (NORMAL / UNITEL / RUSSIA)
FACILITY TYPE	NORMAL / NO REQ

VoIP DSP OPTION

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with ITM3 card installed.)

Provides various VoIP DSP options. *The options set in this MMC are system wide.*

AUDIO CODEC	Selects which audio codec compression to use. Selections are G.711 (64K), G.723.1 (6.4K), G.729A (8K) and G.729.
ECHO CANCEL	Enables or disables echo cancellation (0: disable, 1:enable). This function removes echo that is generated by voice reflection and packet delay.
SILENCE SUPPRESS	Determines whether silence suppression is used (0: disable, 1: enable). This prevents transmission during the silence period of a call.
INPUT FILTER	Selects input filtering of the DSP (0: disable, 1: enable). This should be set to ON.
OUTPUT FILTER	Selects output filtering of the DSP (0: disable, 1: enable). This should be set to ON.
INPUT GAIN	PCM input gain value of DSP. The range is -31dB to 31dB (0-63). This sets the volume of PCM voice from the VOIP DSP to the site.
VOICE VOLUME	Selects the voice volume. The range is -31dB to 31dB (0-63).
MULTIFRAME COUNT	This option selects the number of frames the ITM3 will consolidate in the packet message. The voice packets are buffered to the set number and sent as a single packet. The range is 1-12.
JITTER OPTION	Selects the dynamic jitter specific value. Value determines whether the focus is on packet loss or packet delay. The range is 00-12.
RTP DELAY LIMIT	Value of the delay limit. The status will change when this limit is exceeded. The value is measured in milliseconds (ms). This is used to determine network error.
RTP LOSS LIMIT	Value of the loss limit value. The status will change when this limit is exceeded. The value is measured in percent (%). The range is 00-25 %. This is used to determine network error.
RTP CHECK PERIOD	Packet loss estimated base period measured in seconds. The range is 00-25 seconds. This is used to determine network error.
RTP OVER COUNT	Limit/loss limit excess count. The range is 0-3. This is used to determine network error.
MAX JITTER DELAY	Sets maximum value for jitter buffer.
MIN JITTER DELAY	Sets minimum value for jitter buffer.
DTMF TRANS ROUTE	Enabled/Disabled
FAX ERROR CORRECT	Yes/No

-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with ITM3 card installed.)

Sets the ITM3 Gatekeeper options for identification to a network Gatekeeper. The setting are selectable for each ITM3 card installed.

GK CONNECT	Determines if the ITM3 is to connect to a Gatekeeper. The option are disable or enable.
GK TYPE	Determines if connected to a Samsung SIGK or other type of Gatekeeper.
GK IP ADDR	The Gatekeeper's IP address.
GK NAME	Name identifier of the Gatekeeper. The name comprises nine alphanumeric characters with a space followed by a Gatekeeper identifier (up to 16 characters).
GW: H.323 ID	The H.323 identifier of the ITM3 that is registered with the Gatekeeper (up to 16 characters).
GW: E164 NO	The E.164 identifier of the ITM3 that is registered with the Gatekeeper (up to 16 digits).
RAS MANUAL	Selects automatic or manual registration of Gatekeeper.
GK ROUTING	Selects if Gatekeeper is routing call.

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with LAN interface only.)

Views, stores, prints or clears system alarms. Two levels of faults are displayed: major alarms and minor alarms. Major alarms are usually service-affecting and require a certified technician to determine the fault. A minor alarm indicates a fault that may or may not be service-affecting and usually does not seriously degrade the system's operating capabilities. The alarm buffer will hold up to 100 alarms on a first in/first out (FIFO) basis.

Alarms provide a date and time stamp based on the system time. If applicable, the hardware cabinet, port, and/or slot will be displayed. If an ALARM I/O port is programmed in [MMC 804](#), alarm information can be printed on demand and also as alarm information is provided.

ALARM REPORTING OPTIONS

VIEW ALARM	View alarm buffer (see Alarm Code Table , below)
OVERFLOW CONTROL:	
– OVERWRITTEN:	When buffer is full, the oldest entry in buffer overwritten.
– STOP RECORDING:	When buffer is full, stop recording alarms.
CLEAR ALARM BUF	Clears alarm buffer.
PRINT ALARM BUF	Prints contents of alarm buffer to the assigned alarm I/O port.

Procedure to View Alarms**ACTION****DISPLAY**

1. Open programming and select **851**

Default Data: **Alarm Buffer Overwritten****Related Items:** [MMC 852 Assign System Alarms](#)**ALARM CODE TABLE****(Your system may not support all the codes listed here.)**

ALM CODE	ALARM	DEFINITION
MJA01	POR Restart	MCP restart process has been executed via power on restart (POR).
MJA02	Soft Restart	MCP restart process has been executed via button reset.
MJA03	Mem Reset	The system RAM has been cleared via manual programming (PCMMC or KMMC) resulting in a system reset.
MJA04	MCP Reset	The MCP has reset. Alarm data = Reason - BUS ERR: Restart Bus Error - ADDR.ERR: Restart Address Error - ILLEGAL: Restart Illegal opcode - ZERO DIVID: Restart Zero divide - PRIVILEGE: Restart Privilege Violation - VECTOR 1: Restart Auto Vector Level 1 - DTACK RD: Restart Auto Vector Level 2 - DTACK WR: Restart Auto Vector Level 3 - VECTOR 4: Restart Auto Vector Level 4 - VECTOR 5: Restart Auto Vector Level 5 - VECTOR 6: Restart Auto Vector Level 6 - WR PROTECT: Restart Auto Vector Level 7 - ENDL LOOP: Restart Endless Loop
MJA05	LCP Reset	The SCP or LCP has reset Alarm data = Cabinet (1, 2 or 3)
MJB02	Memory Alarm 1	A RAM diagnostic check error has occurred in the MCP.
MJB03	Memory Alarm 2	A RAM diagnostic check error has occurred in the SCP.
MJB04	Memory Alarm 3	A RAM diagnostic check error has occurred in the LCP 1.
MJB05	Memory Alarm 4	A RAM diagnostic check error has occurred in the LCP 2.

ALM CODE	ALARM	DEFINITION
MJB06	IPC MSGQ Over	IPC TX queue full error has occurred in the MCP. Alarm data = IPC Queue type (MCP-LAN, MCP-SCP, MCP-LCP1, MCP-LCP2)
MJB06	IPC MSGQ Under	IPC TX queue under error has occurred in the MCP. Alarm data = IPC Queue type (MCP-LAN, MCP-SCP, MCP-LCP1, MCP-LCP2)
MJB07	Task MSGQ Over	Task MSG queue full error has occurred in the MCP. Alarm data = Error Task Kind (CNFG, ERRH, NPER, MSGH, DIGH, SMART, CALL, PPER, SMDR, TMMC, IDLE)
MJB07	Task MSGQ Under	Task MSG queue under error has occurred in the MCP. Alarm data = Error Task Kind (CNFG, ERRH, NPER, MSGH, DIGH, SMART, CALL, PPER, SMDR, TMMC, IDLE)
MJC01	DTMF Fault	An abnormal interrupt has occurred in the system DTMF resources. Alarm data = DTMF Receiver number (BASE, MISC)
MJC02	Tone Fault	An abnormal interrupt has occurred in the system tone resources, ie busy, ringback, error, no more calls etc. Alarm data = TONE Receiver number (BASE, MISC)
MJC10	AA-DTMF Fault	An abnormal fault reported in one of the systems AA card DTMF resources. Alarm data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MJC11	AA-MFR Rec	An abnormal fault reported in one of the systems AA card DTMF resources has recovered. Alarm data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MJC12	E911 Restart	The E911 card has restarted. Alarm data = Cabinet, Slot (Cx-Syy)
MJC13	E911 Block	The E911 card has restarted because the system detected the card does not work correctly. Alarm data = Cabinet, Slot (Cx-Syy)
MJC14	VoIP Restart	The ITM3 card has restarted. Alarm data = Cabinet, Slot (Cx-Syy)
MJC15	VoIP Block	The ITM3 card has restarted because the system detect the card does not work correctly. Alarm data = Cabinet, Slot (Cx-Syy)
MJD01	Sync Failure	Clocking on TEPRI cards has become asynchronous.
MJD02	Sync Recovery	Clocking on TEPRI cards has become synchronous.
MJD03	Red Alarm	Locally detected loss of PCM carrier on TEPRI card for more than 250 ms. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD04	Red Alarm Rec	PCM carrier detected locally on TEPRI cards. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD05	Yellow Alarm	Remotely detected failure transmitted in frame on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD06	Yellow Alarm Rec	Remotely detected failure restored transmitted on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD07	Blue Alarm	All 1's being transmitted on facility on TEPRI card. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD08	Blue Alarm Rec	A blue alarm condition has been cleared. Alarm Data = Cabinet, Slot (Cx-Syy)

ALM CODE	ALARM	DEFINITION
MJD09	Bit Error Alarm	Alarm is activated when the when error rate exceeds 1×10^{-6} errors. Note: 1×10^{-6} is threshold for minor alarm, 1×10^{-3} is threshold for major alarm errors on E1, PRI or BRI. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD10	NTWRK Event	An Implausible event has occurred on the PRI or BRI Network digital line. Protocols do not match or subscriber ID mismatch. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD11	SPID Init Error	The BRI received an error from the network Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD12	SPID Init Rec	The BRI has recovered from an error on the network Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD13	LPBK Error	Internal on-demand loopback failed. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD14	LPBK Recovery	Internal on-demand loopback test passed. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD15	BRI DL Unavail	A BRI data link is out of service. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD16	BRI DL Recovery	A BRI data link is back in service. Alarm Data = Cabinet, Slot, Channel (Cx-Syy-czz)
MJD17	RAM Error	An error has occurred in the TEPRI or BRI card RAM. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD18	E1 Restart	The E1 card has restarted Alarm Data = Cabinet, Slot (Cx-Syy)
MJD19	PRI Restart	The PRI card has restarted Alarm Data = Cabinet, Slot (Cx-Syy)
MJD20	BRI Restart	The BRI card has restarted Alarm Data = Cabinet, Slot (Cx-Syy)
MJD21	PCM Loss	Loss of PCM coding on a digital facility. Alarm Data = Cabinet, Slot (Cx-Syy)
MJD22	PCM Recovery	Recovery of PCM coding on a digital facility. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF01	Card Out	A circuit card mounted in a universal slot has been removed from service or is not recognized by the system Alarm Data = Cabinet, Slot (Cx-Syy)
MNF02	Card In	A circuit card mounted in a universal slot has been returned to service. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF03	IPC Error	Inter processor communication error has occurred. Alarm Data = Cabinet-Slot (Cx-Syy)
MNF04	Trunk Fault	Out of service trunk detected via loop detect. Internal CODEC test. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF05	Trunk Recovery	Out of service trunk detected via loop detected as out of service is now operational. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)

ALM CODE	ALARM	DEFINITION
MNF06	Trunk Disconnect	Out of service trunk detected via seizure of trunk. External seizure test. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF07	Trunk Connect	Out of service trunk recovered via seizure of trunk External seizure test. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF08	SIO TxQ Over	SIO Tx Queue full error has occurred in the MCP. Alarm Data = SIO number (SIO:x)
MNF09	SIO TxQ Under	SIO Tx Queue under error has occurred in the MCP. Alarm Data = SIO number (SIO:x)
MNF10	E1 Out Of Srv	E1 Digital line status has been changed to out of service. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF11	E1 In Service	E1 Digital line has been restored to normal service. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF12	SIO Out	IO port has lost DTR Alarm Data = SIO number (SIO:x)
MNF13	SIO In	IO port has regained DTR. Alarm Data = SIO 1 through 3
MNF14	TODC Error	Time of Day Clock in the MCP has erred.
MNF15	TSW Over Alarm	TSW has been requested to exceed the capacity of available time slots. Maximum 192 per cabinet. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF16	PSU Alarm	Indicates there are over 56 ports in a cabinet with a single PSU and more power is required. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF17	PSU Alarm Rec	A second PSU has been recognized when added after alarm condition of: Alarm Data = Cabinet, Slot (Cx-Syy)
MNF18	SLI Fault	An SLI card has been detected as out of service via an internal CODEC test. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF19	SLI Recovery	An SLI card detected as out of service has been detected as recovered and is in service via internal CODEC test. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF20	PSUB Alarm	Indicates there are over 120 ports in a cabinet with two PSUs. Alarm Data = Cabinet, Slot (Cx-Syy)
MNF21	DSS Alarm	System capacity of 64-button DSS modules has been exceeded.
MNF22	Phone Disconnect	Indicates the Keyset is disconnected. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF23	Phone Connect	Indicates the Keyset is connected. Alarm Data = Cabinet, Slot, Port (Cx-Syy-Pzz)
MNF24	NOT USED	FUTURE USE
MNF25	NOT USED	FUTURE USE
MNF26	SIO RxQ Over	SIO Rx Queue full error has occurred in the MCP. Alarm Data = SIO number (SIO:x)
MNF27	SIO RxQ Under	SIO Rx Queue under error has occurred in the MCP. Alarm Data = SIO number (SIO:x)

MMC: 852

ASSIGN SYSTEM ALARMS

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with LAN interface only.)

Assigns system alarms to ring and display on stations that have a System Alarm key programmed in [MMC 722](#). System Alarm key programming is tenant-wide on iDCS500 systems (tenants 1 and 2). Alarms not programmed to report to the System Alarm key will still be retained in the maintenance alarm buffer for alarm reporting ([MMC 851](#)).

The alarm buffer holds up to 100 alarms on a First In/First Out (FIFO) basis. Pressing the System Alarm key and the ANS/RLS key will silence the audible alarm until another alarm is generated by the system. Alarm conditions that have multiple causes (e.g. E1 errors and synchronization loss) will print all associated alarm information if an SIO port is programmed as an ALARM port in [MMC 804](#). The specific fault alarm data can be displayed via MMC 851.

Note: Alarm Notification Off/On (0/1) determines if the alarm provides a visual and audible notification to the System Alarm key station(s). Pressing the System Alarm key and the ANS/RLS key will silence the audible alarm only at the station at which these keys were pressed.

Refer to the Alarm Code Table in [MMC 851](#). Codes MJA01 to MNF27 are designated numbers 01–87 respectively in MMC 852, and each is selectable ON/OFF.

ACTION**DISPLAY**

1. Open programming and select **852**
Display shows
2. Press VOLUME keys to select alarm number and press RIGHT soft key
3. Press VOLUME keys to select alarm ON/OFF (e.g. ON) and press RIGHT soft key
4. Press Transfer/TRSF to store and exit
OR
Press SPEAKER to store and advance to next MMC

01:MJA01 ACT:OFF POR Restart

01:MJA01 ACT:OFF POR Restart

01:MJA01 ACT:ON POR Restart

MMC: 853**MAINTENANCE BUSY**

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems only.)

Puts stations, trunks and common resource equipment in a 'maintenance busy' condition. This can be used to isolate suspected intermittent problem equipment. A station placed in maintenance busy will behave like a station in DND when called. The station's display and any calling station's display (if equipped) will show "MADE BUSY". Stations receiving DDI or E&M type calls will receive a DND/No more calls tone. The station display will still function with station name, time and date. When a busy station is called, it will function like a locked-out station. Trunks made busy cannot originate calls. Ringdown type trunks will still ring the programmed destination. Common resource equipment such as DSPs and CID DSPs, and miscellaneous equipment such as page ports, AA ports or voice mail card ports, can also be placed in a maintenance busy state.

MAINTENANCE BUSY OPTIONS

- | | | |
|----------|---|--|
| 0. TRK | = | Trunks |
| 1. STN | = | Stations |
| 2. PAGE | = | Page Ports |
| 3. AA | = | Auto Attendant card ports |

DIAGNOSTIC TIME

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with LAN interface only.)

Sets the Diagnostic Time. The system diagnostics tests include memory audits, internal loop-back tests on digital trunks, and DSP and AA DSP tests. Additional tests include CO-DEC tests on analogue trunk and station cards and tone tests. If the diagnostics cannot complete the tests because of system traffic, the system will abort the test and retry during the next programmed diagnostic time. It is recommended that you assign the diagnostic time during non-peak traffic periods.

DIAL PAD DAY SELECTION

0= Sunday
1= Monday
2 = Tuesday
3 = Wednesday
4 = Thursday

PROGRAMMING LOGS

DCS	X	CI	X	CII	X	816	X	408	X	408i	X	iDCS500	✓	iDCS100	✓
-----	---	----	---	-----	---	-----	---	-----	---	------	---	---------	---	---------	---

Purpose: (iDCS systems with LAN interface only.)

Lists the date, time and entry location of the last eight technician-level and customer-level programming accesses. This allows you to determine if there was unauthorised access to system programming and where this access occurred.

There are four types of access location information:

- NNN(N)** The extension number of a keyset that accessed programming (e.g. 211)
- MODEM** Indicates that programming was accessed by PCMMC via the integrated V90 modem attached to the IOM board (iDCS500) or MISC card (iDCS100).
- LAN** Indicates that programming was accessed by PCMMC via the LAN connection on the IOM board (iDCS500) or MEM4 card (iDCS100).
- SIOx** Indicates that programming was accessed by PCMMC via one of the SIO connections on the IOM board (iDCS500) or MISC / MEM4 card (iDCS100), where x is the number (1–4) of the SIO port that was used.

ACTION

1. Open programming and select **856**

Display shows entry (1) with the start programming time and date (MM/DD/HH/MM) on the top line and the access location (e.g. station 211) and end date and time of programming on the lower line
